Our Cherished Halls of Ivy Phillip L. Beukema,2022-10-10 Higher education has both supporters and detractors although not in equal numbers Some would have us believe that our higher education enterprise is on the brink of disaster that it's falling apart at the seams Some go so far as to call the system broken beyond repair suggesting that it be rebuilt from the ground up Can it be this bad Drawing on his long experience in higher ed administration the author examines the sea change that's affected nearly every corner of the higher learning landscape These corners include the high and rising

costs of tuition the crushing levels of student debt the shamefully low graduation rates in too many schools the growing million dollar clubs whose members include university presidents and football and basketball coaches the inadequacies of accreditation and the growing influence of partisan politics in the conduct of our public universities That s for starters With an insider s perspective the author paints a picture that is up front and honest laying bare the depth and extent of specific problems confronting that crucial engine of our economy higher education In each case he spells out what needs a tune up and what needs something closer to an overhaul Of course he offers specific proposals for fixing those problems They re likely to be controversial but the author hopes they spark a debate that ultimately leads to productive solutions *Scour and Erosion* Liang Cheng, Scott Draper, Hongwei An, 2014-11-06 The 7th International Conference on Scour and Erosion ICSE 2014 was organised by the School of Civil Environmental and Mining Engineering and the Centre for Offshore Foundation Systems at the University of Western Australia under the guidance of the Technical Committee 213 for Scour and Erosion of the International Society of Soil Mechanics and Geotechnical Engineering ISSMGE This biennial conference draws together leading academics scientists and engineers engaged in scour and erosion research to present and exchange their latest scientific findings These proceedings together with the six previous proceedings dating from 2002 present a rare collection of technical and scientific developments in scour and erosion research which have been established over the last 12 years This book includes state of the art papers in scour and erosion from ICSE 2014 covering the 6 themes of internal erosion sediment transport advanced numerical modelling of scour and erosion terrestrial scour and erosion river bridge scour and erosion and marine scour and erosion The proceedings include 5 keynote lectures from world leading researches cutting across the themes of scour and erosion together with 87 peer reviewed papers from 19 countries This book is ideal for researchers and industry working at the forefront of scour and erosion both with application to rivers and marine operations

Psychology in Crisis Brian Hughes, 2018-08-14 Throughout the history of psychology attempting to objectively measure the highly dynamic phenomenon of human behaviour has given rise to an underappreciated margin of error Today as the discipline experiences increasing difficulty in reproducing the results of its own studies such error not only threatens to undermine psychology's credibility but also leaves an indelible question Is psychology actually a field of irreproducible science In this thought provoking new book author Brian Hughes seeks to answer this very question In his incisive examination of the various pitfalls that determine good or bad psychological science from poor use of statistics to systematic exaggeration of findings Hughes shows readers how to critique psychology research enhance its validity and reliability and understand the strengths and weaknesses of the way psychology research is produced published and promulgated in the 21st

century This book is essential reading for students wanting to understand how to better scrutinise psychological research methods and results as well as practitioners and those concerned with the replication debate

The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02

Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of propection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales
