### **Introduction**

Every graduating high school students are challenged with the problem of having to decide on future career paths. Throughout certain points in the school year, it is not surprising to see masses of them trooping to various university campuses for the purpose of taking their entrance exams. After all, that is a major step in being able to attend the college of their choice. The most difficult decisions for them to make are the choice of college institutions to attend, and also what course program to take. For students who see themselves attending in a university, the assessment process perhaps undertakes high priority especially nowadays that the higher education has transformed in many ways. Choosing a course carefully is an important aspect which will give conclusion to a student's academic endeavor.

Recently, the Department of Education (DepEd) implemented career guidance for high school students in public secondary schools nationwide to help them get ready for higher education after graduation. Using this study, the researchers aims to determine how helpful the career pathing and guidance programs for students in deciding on course program they would take.

The researchers have decided to make a study about the factors that graduating high school students consider in choosing a career. We will be providing information that will cover various factors such as: having better job opportunities, pursuing your passion, etc. We believe that this research will help students and parents alike in choosing a course. Also, the researchers would like to present it to colleges and universities in order for them to promote their education based on the preferences of high school graduates.

### **Background of the Study**

Many of the youth today are confused and uncertain as to what path they should follow after their high school days. During the 1960's and even today, people who graduated college found more job opportunities available to them than those who had a lower form of education. We believe that students who graduate college with the course suited for them will even have a higher percentage of getting a job.

Almost all high school graduates go through a hard time in trying to single out a course that will be an influential factor of what they will be in the near future. Due to the number of courses today, graduating high school students may find themselves in a difficult situation. We understand how important it is to pick the right course since different people have a different set of skills.

This research provides further analysis on influential factors that the students consider in deciding what course to take. For this purpose, the researchers worked on a study to understand high school students' choices by selecting the graduating students of Immaculate Conception Academy – West Campus to see the insights and perception of students coming from a private sector.

**Organizations: Assessing and Expanding the Carnegie Perspective** Daniella Laureiro Martinez,Pino Audia,Daniel A. Newark,2024-09-04 Within the broader study of decision making the Carnegie perspective occupies a unique place Initially developed by pioneering scholars such as Herbert Simon and James March it views organizational decisions as resulting from the combined influences of a psychological processes of attention allocation interpretation of experience and motivated

search and b features of the organizational context that direct attention influence preferences contend with ambiguity contain conflict and divide labor Despite its unique strengths and a considerable body of work see below some foundational references research that adopts the Carnegie perspective is still relatively unknown outside the field of organization studies As James March noted Carnegie has been primarily an importer of ideas rather than an exporter The goal of this research topic is to facilitate dialogue and integration between this well established Carnegie perspective and other lines of inquiry into the study of decision making and problem solving We are interested in bringing to the fore what is distinctive in the accumulated body of evidence produced by the Carnegie perspective and highlighting similarities differences and potential points of connection with other research done on similar topics To achieve this goal we hope that the front end of each submission will cover the following four components

**Dynamics of decision making: from evidence to preference and belief** Erica Yu, David A. Lagnado, 2014-10-24 At the core of the many debates throughout cognitive science concerning how decisions are made are the processes governing the time course of preference formation and decision From perceptual choices such as whether the signal on a radar screen indicates an enemy missile or a spot on a CT scan indicates a tumor to cognitive value based decisions such as selecting an agreeable flatmate or deciding the guilt of a defendant significant and everyday decisions are dynamic over time Phenomena such as decoy effects preference reversals and order effects are still puzzling researchers For example in a legal context jurors receive discrete pieces of evidence in sequence and must integrate these pieces together to reach a singular verdict From a standard Bayesian viewpoint the order in which people receive the evidence should not influence their final decision and yet order effects seem a robust empirical phenomena in many decision contexts Current research on how decisions unfold especially in a dynamic environment is advancing our theoretical understanding of decision making This Research Topic aims to review and further explore the time course of a decision from how prior beliefs are formed to how those beliefs are used and updated over time towards the formation of preferences and choices and post decision processes and effects Research literatures encompassing varied approaches to the time scale of decisions will be brought into scope a Speeded decisions and post decision processes that require the accumulation of noisy and possibly non stationary perceptual evidence e g randomly moving dots stimuli within a few seconds with or without temporal uncertainty b Temporally extended value based decisions that integrate feedback values e g gambling machines and internally generated decision criteria e g when one switches attention selectively between the various aspects of several choice alternatives c Temporally extended belief based decisions that build on the integration of evidence which interacts with the decision maker's belief system towards the updating of the beliefs and the formation of judgments and preferences as in the legal context Research that emphasizes theoretical concerns including optimality analysis and mechanisms underlying the decision process both neural and cognitive is presented as well as research that combines experimental and computational levels of analysis
