What Makes a World-Class School and How We Can Get There James H. Stronge, Xianxuan Xu, 2017-06-15 For years students in the United States have lagged behind students in many other countries on such measures of achievement as the PISA and TIMSS assessments. In an increasingly globalized world such a gap is worrisome. Armed with statistics, examples, and cautionary tales from Scandinavia to Japan, James H. Stronge and Xianxuan Xu have written a book that can help educators better prepare students and close that gap. In *What Makes a World Class School and How We Can Get There* you will find careful analysis of recent international assessment results, what they mean, and what can be done to improve them. In depth profiles of high achieving education systems around the globe, their histories, their lessons learned, and what they can teach educators and policymakers in the United States. Strategies for aligning successful educational approaches from international systems to U.S. schools, which strategies to use in which subjects, and with which students. Transformative ideas for cultivating a truly world class system of schooling. Both simple and complex ways to raise the bar for all students, no matter what their background. Educators in every country must ensure that their students are as prepared as possible to lead a future generation of citizens. This thought provoking and copiously researched book provides educators with a blueprint for radical improvement based on the hard learned experiences of their peers around the world.

Future Communication Technology and Engineering Kennis Chan, 2015-04-06 This volume contains the papers presented at the 2014 International Conference on Future Communication Technology and Engineering (FCTE2014) taking place in Shenzhen, China, from 16-17 November 2014. Communication technologies are developing quickly and there are more possibilities for future communication technologies provided by the achievements made rather than limitations. At the convention innovative and inspiring ideas were presented, certain controversial topics were discussed, e.g. what are the most efficient, convenient methods for information communication and what is the most probable prospect for future communication technology. It is difficult to make any definite conclusions from these presentations and discussions, but the desire and drive for improvement and development shown by the participants' authors are surely remarkable and respectable. In this book 70 papers are included, chosen from hundreds of submissions contributed by scientists from various countries and regions, after careful reading and discussing by a team of reviewers. These papers cover almost every possible aspect of communication technology, including communication systems, automation and control, engineering, electrical engineering, AI, algorithms, signal processing, data mining, and knowledge based systems.
