Climate Change

The climate change is caused by greenhouse gas accumulation in the atmosphere. This has to change and we have to start to doing everything we can to turn this situation around. We have to focus on what causes the most greenhouse gas accumulation. Furthermore, we have to find solutions and act on it, as soon as we can, because this problem is getting bigger day by day.

The year 2015, 195 nations (developed countries) decided to limit the global average temperature increase to well below 2°. This is called the Paris Agreement. Big factor is to reduce carbon emissions, but unfortunately that can take really long time.

In addition to make the atmosphere better, the people who live on earth must change their lifestyle and reduce personal emissions. First of all is to change consumption habits. Try living without a car and use public transport, if possible. Many families have two to four cars, which is not necessary. Try not to travel much by airplanes. We should eat more vegetarian food and use multifunctional products as much as we can. In each family one fewer child should be born, because each individual cause 58,6 tonnes CO₂-equivalent emission reductions per year. People attend to focus to much on lower-impact actions, which we do not have time to do.

Moreover, is very important to educate people, so everybody will be informed about climate environ. It would be best to teach our children about this, so they can be conscious from early age and then they are more likely to be environmentally friendly. They would be more likely to reuse. Things like multifunctional shopping bags and reusable water bottles matters. People should never throw clothes away, they should try to sell them or give them away to people who can use them. In household heating people can turn down thermostat, green energy should be used.

Iceland is very provided when it comes to the environment. Most of the people in Iceland sort their wasting. Which is very important and very helpful. For example, we use our resources better, we save money, less land will be used for refuse and only positive reasons. Plastic-use is the biggest problem in the world. If we do nothing there will be more plastic in the sea than fish the year 2050. Only 5% of all plastic in the world is recycled, the 95% is not. 40% of the plastic ends in the sea. These numbers are scary, we really have to start to do something. It is very different between countries how high percapita emissions are. In Australia the average is 16, 3 tCO₂ per year, in Canada it is 13, 5 tCO₂, the average in USA

Paper On Climate Change:

The Warming Papers David Archer, Raymond Pierrehumbert, 2013-04-29 Chosen for the 2011 ASLI Choice Honorable Mention History Category for a compendium of the key scientific papers that undergird the global warming forecast Global warming is arguably the defining scientific issue of modern times but it is not widely appreciated that the foundations of our understanding were laid almost two centuries ago with the postulation of a greenhouse effect by Fourier in 1827 The sensitivity of climate to changes in atmospheric CO₂ was first estimated about one century ago and the rise in atmospheric CO₂ concentration was discovered half a century ago The fundamentals of the science underlying the forecast for human induced climate change were being published and debated long before the issue rose to public prominence in the last few decades The Warming Papers is a compendium of the classic scientific papers that constitute the foundation of the global warming forecast The paper trail ranges from Fourier and Arrhenius in the 19th Century to Manabe and Hansen in modern times Archer and Pierrehumbert provide introductions and commentary which places the papers in their context and provide students with tools to develop and extend their understanding of the subject The book captures the excitement and the uncertainty that always exist at the cutting edge of research and is invaluable reading for students of climate science scientists historians of science and others interested in climate change

Relating Climate Change to Its Effects Central Intelligence Agency, Foreign National Foreign Assessment Center, 2005-12-01 Because climate can exert a profound influence on man's use of the environment interest in global climate is widespread and growing Still there is little consensus concerning the direction magnitude and timing of global climatic change there is no accepted methodology for determining what effect a global climate change would have on climate sensitive endeavors such as agriculture and data essential to this linkage process have not been readily available This report partially fills these voids It describes a simple model that evaluates the effect of climate It offers as an example an explanation of how the model was used to derive an estimate of grain production as a function of climate It provides a data base that permits researchers to use the model to make estimates of the effects of climate on subjects of their interest It suggests ways to improve the reliability of such estimates in given geographic areas

COP26 special report on climate change and health, 2021-05-31

A Human Health Perspective on Climate Change Interagency Working Group on Climate Change and Health (U.S.), 2010 An ad hoc Interagency Working Group on Climate Change and Health IWGCCH assembled to develop a white paper on relevant federal research and science needs including research on mitigation and adaptation strategies Examples of mitigation and adaptation research needs are identified but a comprehensive discussion of these issues is not included These research and science needs broadly include basic and applied science technological innovations and capacities public health infrastructure and communication and education Consideration is also given to the potential structure of a federal climate change and

health research agenda and the use of scientific research results for applications and decision making The purpose of this paper is to identify research critical for understanding the impact of climate change on human health so that we can both mitigate and adapt to the environmental effects of climate change in the healthiest and most efficient ways Although the group recognizes the global nature of climate change s impacts on human health the primary focus of this paper is on the situation in the United States Page v

Climate Change and Cities Cynthia Rosenzweig,William D. Solecki,Stephen A. Hammer,Shagun Mehrotra,2011-04-28 Urban areas are home to over half the world s people and are at the forefront of the climate change issue The need for a global research effort to establish the current understanding of climate change adaptation and mitigation at the city level is urgent To meet this goal a coalition of international researchers the Urban

Climate Change Research Network UCCRN was formed at the time of the C40 Large Cities Climate Summit in New York in 2007 This book is the First UCCRN Assessment Report on Climate Change and Cities The authors are all international experts from a diverse range of cities with varying socio economic conditions from both the developing and developed world It is invaluable for mayors city officials and policymakers urban sustainability officers and urban planners and researchers professors and advanced students *Relating Climate Change to Its Effects* National Foreign Assessment Center (U.S.),1978 Climate Change Policy Failures: Why Conventional Mitigation Approaches Cannot Succeed Howard A Latin,2012-05-14 At the recent UN Climate Change Conferences in Copenhagen Cancun and Durban the developed nations promised hundreds of billions of dollars in financial aid to help developing countries overcome global climate change dangers The developed nations will need to spend many more billions to limit their own greenhouse gas pollution the main cause of global warming and climate change Will all this money and effort be wasted This book argues that nearly all of the world s climate policy makers and expert advisors have been making tragic mistakes that ensure the failures of climate change mitigation attempts The great majority of climate change programs from American congressional bills to cap and trade economic incentive schemes to the Kyoto Protocol and other international treaties rely on greenhouse gas emissions reduction targets that will prove too little too late by deferring strict pollution controls too far into the future The inadequate emissions reduction measures also will not be able to bridge the gap between the highest priorities of developed and developing nations Vast discharges of greenhouse gases authorized by weak emissions reduction programs in the next several decades virtually guarantee that the cumulative concentration of greenhouse gases in the atmosphere will keep increasing while climate change continues to grow worse Rather than adopting ineffectual emissions reduction programs that cannot limit the cumulative concentration of greenhouse gases in the air this book proposes a shift to a clean technology replacement strategy that could support current lifestyles and expanding economic development without further damaging our climate The only way to reduce the greenhouse gas levels in the atmosphere enough to decrease climate change hazards is to replace large pollution sources as rapidly as feasible in as many industrial sectors and geographic regions as possible with clean alternative technologies processes and methods *The Petroleum Papers* Geoff Dembicki,2022-09-20 A WASHINGTON POST BEST BOOK OF THE YEAR An essential read The Washington Post Essential This book belongs on the shelf next to Merchants of Doubt Dark Money and Kochland Roy Scranton author of Learning to Die in the Anthropocene The petroleum industry is guilty of a Big Tobacco style public cover up according to this vivid expos Publishers Weekly STARRED Review Burning fossil fuels will cause catastrophic global warming this is what top American oil executives were told by scientists in 1959 But they ignored that warning Instead they developed one of the biggest most polluting oil sources in the world the oil sands in Alberta Canada As investigative journalist Geoff Dembicki reveals in this explosive book the decades long conspiracy to keep the oil sands flowing into the U S would turn out to be one of the biggest reasons for the world s

failure to stop the climate crisis In *The Petroleum Papers* Dembicki draws from confidential oil industry documents to uncover for the first time how companies like Exxon Koch Industries and Shell built a global right wing echo chamber to protect oil sands profits a misinformation campaign that continues to this day He also tells the high stakes stories of people fighting back a Seattle lawyer who brought down Big Tobacco and is now going after Big Oil a Filipina activist whose family drowned in a climate disaster and a former Exxon engineer pushed out for asking hard questions With experts now warning we have less than a decade to get global emissions under control *The Petroleum Papers* provides a step by step account of how we got to this precipice and the politicians and companies who deserve our blame Published in Partnership with the David Suzuki Institute

Greenhouse: Coping with Climate Change WJ Bouma,GI Pearman,MR Manning,1996-01-01 Consideration of climate change deals increasingly with impacts and responses and therefore involves a wide range of technical issues and a diverse community of experts One of the challenges faced is that of ensuring effective communication between these different areas of expertise For example climate change studies require new types of collaboration between carbon cycle modellers and economists and between meteorologists and coastal geomorphologists Furthermore there is a need to distil balanced assessments ranging across many disciplines for the benefit of all policymakers *Greenhouse Coping with Climate Change* brings together the contributions of many experts to the climate change debate This book is a landmark publication summarising our understanding of climate change issues as they affect Oceania It contains review papers that report on the status of knowledge methodologies and developments and a selection of focused papers that expand on specific issues and present significant new developments of wide general interest and relevance to the region

The Changing Profile of Corporate Climate Change Risk Mark Trexler,Laura Kosloff,2017-09-08 This book will help business executives to 1 rethink their perceptions of climate risk 2 evaluate whether their company is effectively positioned and 3 make informed and prudent business decisions about climate change risk in an environment rife with policy uncertainty Business risk associated with climate change is commonly assumed to be primarily policy driven Many companies internalize the current stalemate over global climate policy into a perception that climate risk is no longer a critical issue Business climate risks however include Operational and Supply Chain Physical Risk Brand Risk Market driven Structural Risk Liability Risk As national and global policy to materially reduce climate change is delayed it is business prudent to assume that the level of climate risk is increasing Even if policy risk might seem lower today than a few years ago political will can change quickly Should physical impacts of climate change manifest in dramatic ways for example draconian climate policy is likely to follow quickly These conditions create a complex and shifting business risk environment and most companies either overlook or substantially underestimate key climate risks How many companies for example are positioned for material climate change outcomes whether physical or regulatory Companies with little climate change exposure may not face much downside risk from taking a wait and see approach For those with greater exposure being too late to respond will mean costs and competitive impacts

that could have been avoided Being too early however can mean being penalized later for actions that reduce a company s emissions today or competitive disadvantage from getting too far out in front of competitors
