

### Philosophy of Nursing Paper

When writing about a personal nursing philosophy you should know what exactly a nursing philosophy is. Nursing is a professional career within a healthcare sector setting that focuses on caring for the wounded or ill and in some cases, such as the labor and delivery unit, you care for healthy patients. You are not limited to a specific criterion for those you care for. You may care for entire families or only one individual from a family. Nursing should encompass the concepts of patients, health, environment, and nurse with the quality of caring. (Ryan, 2016) "Philosophy is the study of wisdom, fundamental knowledge, and the processes used to develop and construct one's perceptions of life. Philosophy provides a viewpoint and implies a system of values and beliefs. Each individual develops a personal philosophy to give meaning to experiences and to guide behavior and attitudes. Personal philosophies are developed by learning from interpersonal relationships, through formal and informal educational experiences, through religion and culture, and from the environment" (Taylor, Lillis, Lynn, & LeMone, 2015).

Nursing is not just a career that I can achieve, it is also something that can benefit my self-worth. Being a nurse does not only take significant skill, time and education, but it also takes heart. If you are not someone who enjoys helping people and learning new things as you go along, then nursing may not be the right fit for someone. To be a good nurse, it takes a lot of patience, have a willingness to grow and learn, and requires you to be very caring and thoughtful. You must want to help others around you and achieve a love and a drive to succeed in a goal such as helping a patient achieve optimal health or make it through a hardship.

There is a list of specific characteristics that should accompany every good nurse. Communication is one of the key characteristics, since you use it to build a patient-nurse relationship and use it to maintain a solid foundation in your work setting. Attention to detail because, one small mistake can do more harm than help and it's crucial to keep your patients safe. Empathy, emotional stability and flexibility because, you are in an area where tremendous amounts of tragic and traumatic incidents can happen. A good nurse must be able to handle the pressure while still staying focused and successfully caring for the people around. Problem solving skills and quick response is another characteristic that's crucial. A nurse must be able to quickly identify a problem and do what's necessary to correct the problem in a timely and acceptable manner. Time is of the essence in the nursing field. Finally, a good nurse must have respect for others. Respect can go a long way in helping build a relationship that's trusting and kind, weather that be in patients, their families or coworkers. *Personal Philosophy and Disciplinary Perspective of Nursing* Mona Alaanzi,2016-11-17 Essay aus dem Jahr 2016 im Fachbereich Pflegewissenschaft Pflegemanagement Sprache Deutsch Abstract Gaining more experience and knowledge in philosophy nursing philosophy and the nursing paradigm has helped me to know more about myself as a human being and as a nurse In the process of reading I find it hard to commit to one point of view or one perspective however now I clearly see where I fit My philosophical perspective in general and in nursing specifically are heavily influenced by the empiricism and positivism perspective and ultimately aligns with the totality nursing paradigm From my ontological perspective in general I believe in objectivism that there is a single truth and there is a single reality I believe that we as human beings are always in interaction with the external reality which is the environment I believe that the environment is everything surrounding us and we as human beings interact with and influence the environment and the environment interacts with and influences us in turn In other words if someone follows a certain action he she will be able to predict what the outcomes will be To illustrate if I throw a ball up in the air I expect that it will hit the ground Another example could be if I follow a specific diet and a specific exercise to lose weight then the result will be what I expected which is weight loss unless there are some other contributing factors From my epistemological standpoint I believe that reality can be captured by senses and can be predicted by experience I believe that there is no knowledge without experience To illustrate if someone says an apple is red I can t imagine what the apple looks like if I have never seen a red one before How can one know what something tastes like if they have never tasted it Experience is anything that came across our mind at any certain time in the past I also believe

that knowledge can be gained through reasoning According to wisdom in my culture The reason is known the surprise is blown In other words knowledge needs clarifications and explanation so only reasoning can transform sensory data into something meaningful and understandable      Philosophies and Theories for Advanced Nursing Practice Butts,Karen L.
