Origin Of Mass And Strong Coupling Gauge Theories (Scgt 15) - Proceedings Of The Sakata Memorial Kmi Workshop Yasumichi Aoki, Toshihide Maskawa, Shin'ichi Nojiri, Masaharu Tanabashi, Koichi Yamawaki, 2017-12-06 This volume contains contributions to the workshop which was largely focused on the strong coupling gauge theories in search for theories beyond the standard model particularly the LHC experiments and lattice studies of conformal fixed point The main topics include walking technicolor and the role of conformality in view of the 125 GeV Higgs as a light composite Higgs technidilaton and other composite Higgs etc Nonperturbative studies like lattice simulations and stringy holographic approaches are extensively discussed in close relation to the phenomenological studies After the discovery of 125 GeV Higgs at LHC the central issue of particle physics is now to reveal the dynamical origin of the Higgs itself One of the possibilities would be the composite Higgs based on the strong coupling gauge theory in the TeV region such as the technidilaton predicted in walking technicolor with infrared conformality The volume contains among others many of the latest important reports on walking technicolor and related subjects in the general context of conformality in a way of direct relevance to the LHC phenomenology as well as the lattice studies It is very timely to study full theoretical implications in the exciting era when the LHC is vigorously working This volume is of great importance for that purpose Speakers of 40 talks plus posters include K I Aoki Y Aoki K Bamba E Bennett R S Chivukula H Georgi A Hasenfratz D K Hong K Itoh D Elander G Fleming H Fukano Y Iwasaki M Jarvinen D Kadoh S Kim R Kitano K I Kondo J Kuti D Lin N Maru H Matsufuru S Matsuzaki K I Nagai C Nonaka H Ohki E Pallante M Rho E Rinaldi F Sannino D Schaich A Shibata R E Shrock E H Simmons K Tuominen C H Wong N Yamada M J S Yang and K Yamawaki

Inner Space/Outer Space Edward Kolb, Fermi National Accelerator Laboratory, 1986-04 Inner Space Outer Space brings together much of the exciting work contributing to a new synthesis of modern physics Particle physicists concerned with the inner space of the atom are making discoveries that their colleagues in astrophysics studying outer space can use to develop and test hypotheses about the events that occurred in the microseconds after the Big Bang

and that shaped the universe as we know it today The papers collected here from scores of scientists constitute the proceedings of the first major international conference on research at the interface of particle physics and astrophysics held in May 1984 The editors have written introductions to each major section that draw out the central themes and elaborate on the primary implications of the papers that follow **Energy Research Abstracts** ,1987 Nuclear Science Abstracts ,1976 *Electron and Proton Kinetics and Dynamics in Flaring Atmospheres* Valentina Zharkova,2012-06-25 This timely book presents new research results on high energy particle physics related to solar flares covering the theory and applications of the reconnection process in a clear and comprehensible way It investigates particle kinetics and dynamics in flaring atmospheres and their diagnostics from spectral observations while providing an analysis of the observation data and techniques and comparing various models Written by an internationally acclaimed expert this is vital reading for all solar astro and plasma physicists working in the field ERDA Energy Research Abstracts ,1983 *A Standard Dictionary of the English Language, Upon Original Plans ...* ,1894 **Forest and Stream** ,1902 The effect of hearing loss on neural processing Jonathan E. Peelle,Arthur Wingfield,2015-06-03 Efficient auditory processing requires the rapid integration of transient sensory inputs This is exemplified in human speech perception in which long stretches of a complex acoustic signal are typically processed accurately and essentially in real time Spoken language thus presents listeners auditory systems with a considerable challenge even when acoustic input is clear However auditory processing ability is frequently compromised due to congenital or acquired hearing loss or altered through background noise or assistive devices such as cochlear implants How does loss of sensory fidelity impact neural processing efficiency and health How does this ultimately influence behavior This Research Topic explores the neural consequences of hearing loss including basic processing carried out in the auditory periphery computations in subcortical nuclei and primary auditory cortex and higher level cognitive processes such as those involved in human speech perception By pulling together data from a variety of disciplines and perspectives we gain a more complete picture of the acute and chronic consequences of hearing loss for neural functioning Phase-locked Loops & Their Application William C. the observed properties structures and dynamics of cosmic plasmas An assessment of the status of understanding of microscale processes in all astrophysical collisionless plasmas is provided The topics discussed include turbulence in astrophysical and solar system plasmas as a phenomenological description of their dynamic properties on all scales observational theoretical and modelling aspects of collisionless magnetic reconnection the formation and dynamics of shock waves and a review and assessment of microprocesses such as the hierarchy of plasma instabilities non local and non diffusive transport processes and ionisation and radiation processes In addition some of the lessons that have been learned from the extensive existing knowledge of laboratory plasmas as applied to astrophysical problems are also covered This volume is aimed at graduate students and researchers active in the areas of cosmic plasmas and space science Originally published in Space Science Reviews journal Vol 278 2 4 2013

Particles, Strings and Cosmology Kiwoon Choi,Jihn E. Kim,Dongchul Son,2005-12-12 PASCOS is an interdisciplinary symposium on the interface of of Particle physics String theory and Cosmology Over the past two decades these three disciplines have increasingly become closer Historically there was always a strong overlap between particle physics and cosmology This connection has become even stronger with the realization that some of the fundamental issues in cosmology such as the presence of dark matter and dark energy may possibly find a resolution only via new theories of particle physics At the same time string theory has begun to play an increasingly important role in particle physics as a possible framework for building unified models of particle interaction including gravity In recent years we have seen an increasing overlap between cosmology and string theory and currently the area of string cosmology is one of the most active fields of research PASCOS 2005 aimed to provide coherent discussions of recent developments on the interface of the three disciplines and also on their interconnections In particular superstring aspects in low energy particle theory SUSY and cosmological applications moduli stabilization are extensively covered in this volume Topics include dark matter and dark energy baryogenesis flavor and CP violation neutrino physics supersymmetry and extra dimensions flux compactification string model building as well as brane cosmology
