### **Machine Learning and Artificial Intelligence in Chemical and Biological Sensing**

Jeong-Yeol Yoon, Chenxu Yu, 2024-07-07 Machine learning (ML) has recently become popular in chemical and biological sensing applications. ML is a subset of artificial intelligence (AI) and other AI techniques have been used in various chemical and biological sensing. Machine Learning and Artificial Intelligence in Chemical and Biological Sensing covers the theoretical background and practical applications of various ML/AI methods toward chemical and biological sensing. No comprehensive reference text has been available previously to cover the wide breadth of this topic. The Editors have written the first three chapters to firmly introduce the reader to fundamental ML theories that can be used for chemical biosensing. The subsequent chapters then cover the practical applications with contributions by various experts in the field. They show how ML and AI-based techniques can provide solutions for: 1) identifying and quantifying target molecules when specific receptors are unavailable; 2) analyzing complex mixtures of target molecules such as gut microbiome and soil microbiome; 3) analyzing high throughput and high dimensional data such as drug screening, molecular interaction, and environmental toxicant analysis; 4) analyzing complex data sets where fingerprinting approach is needed. This book is written

primarily for upper undergraduate students graduate students research staff and faculty members at teaching and research universities and colleges who are working on chemical sensing biosensing analytical chemistry analytical biochemistry biomedical imaging medical diagnostics environmental monitoring and agricultural applications Presents the first comprehensive reference text on the use of ML and AI for chemical and biological sensing Provides a firm grounding in the fundamental theories on ML and AI before covering the practical applications with contributions by various experts in the field Includes a wide array of practical applications covered including E nose Raman SERS lens free imaging multi hyperspectral imaging NIR optical imaging receptor free biosensing paper microfluidics single molecule analysis in biomedicine in situ protein characterization microbial population dynamics and all in one sensor systems
