specialized coverage of microwave technology with a focus on the low power wireless units required in modern wireless systems. It explores results of recent research that focused on a holistic integrated approach to the topics of materials, devices, circuits, modulation and architectures rather than the more traditional approach of research into isolated topical areas. Twelve chapters deal with various fundamental research aspects of low power wireless electronics written by world class experts in each field. The first chapter offers an overview of wireless architecture and performance followed by detailed coverage of Advanced GaAs based HBT designs, InP based devices and circuits, Si/SiGe HBT technology, Noise in GaN devices, Power amplifier architectures and nonlinearities, Planar oriented components, MEMS and micromachined components, Resonators, filters and low noise oscillators, Antennas, Transceiver front end architectures. With a clear focus and expert contributors, *RF Technologies for Low Power Wireless Communications* will be of interest to a wide range of electrical engineering disciplines working in wireless technologies. *Principles of Microwave Ferrite Engineering* Joseph Helszajn, 1969 **College of Engineering (University of Michigan) Publications** University of Michigan.
