procedures for measuring behavior and designing within subject comparisons between control and intervention conditions. The text explains the strengths and weaknesses of methodological alternatives for every topic so that behavioral researchers and practitioners can make the best decisions in each situation. This classic text has been extensively revised to be more accessible and practical. Not only does it feature much more discussion of how research methods are relevant to today's practitioners, it also includes additional examples based on field research and service delivery scenarios. With expanded coverage on creating experimental designs as well as new chapters on behavioral assessment, the statistical analysis of data, and ethical issues associated with research methods, this book provides a strong foundation for direct behavioral measurement within subject research design and interpretation of behavioral interventions. Enriched with more pedagogical features including key terms tables summarizing important points, figures to help readers visualize text, and updated examples and suggested readings, this book is an invaluable resource for students taking courses in research methods. This book is appropriate for researchers and practitioners in behavior analysis, psychology education, social work, and other social and health science programs that address questions about behavior in research or practice settings.

*Going to University. The Influence of Higher Education on the Lives of Young South Africans* Jennifer Case, Delia Marshall, 2018-02-09

Around the world, more young people than ever before are attending university. Student numbers in South Africa have doubled since democracy and for many families, higher education is a route to a better future for their children. But alongside the overwhelming demand for higher education, questions about its purposes have intensified. Deliberations about the curriculum, culture and costing of public higher education abound from student activists, academics, parents, civil society and policy makers. We know from macro research that South African graduates generally have good employment prospects. But little is known at a detailed level about how young people actually make use of their university experiences to craft their life courses. And even less is known about what happens to those who drop out. This accessible book brings together the rich life stories of 73 young people six years after they began their university studies. It traces how going to university influences not only their employment options but also nurtures the agency needed to chart their own way and to engage critically with the world around them. The book offers deep insights into the ways in which public higher education is both a private and public good and it provides significant conclusions pertinent to anyone who works in and cares about universities.
