Wced Past Papers:

The Role of Renewable Energy Technology in Holistic Community Development Alexander Zahnd, 2014-01-25 This thesis documents almost twenty years of the author's work on the development and implementation of a new approach to holistic community development in remote and disadvantaged villages in Nepal. It describes the theoretical basis of the work, the main research activities and the practical outcomes of the implemented programs. One of the fundamental cornerstones of holistic community development is the provision of appropriate and sustainable solutions for the long-term development of local communities. This requires that people's own identified needs be recognized and addressed in partnership with them in holistic ways. The author explains the many synergies that result from this holistic approach to community development. Another cornerstone of his approach is to utilise the communities' locally available renewable resources for long-term sustainable development. One of the key findings of the thesis is that improved access to energy services such as cooking with a smokeless metal stove in a clean indoor environment, basic indoor lighting and increased food production and safe food storage through a greenhouse and a solar drier respectively need to be at the very heart of any long-term holistic community development project. The thesis demonstrates that tapping into locally available renewable energy resources and converting them through contextualized and locally manufactured renewable energy technologies has a central role in long-term holistic community development programs. Such programs are successful because they provide both appropriate technologies and life-changing experiences for the local users involved.

Learning Spaces in Africa Ola Uduku, 2018-06-14 With a key UN Sustainable Development Goal for 2030 being to make basic education available to all the world's children, Learning Spaces in Africa explores the architectural, socio-political and economic policy factors that have contributed to school design, the main spaces for education and learning in Africa. It traces the development of school building design focusing on Western and Southern Africa from its emergence in the 19th century to the present day. Uduku's analysis draws attention to the past historic links of schools to development processes from their early 19th-century missionary origins to their re-emergence as development hubs in the 21st century. Learning Spaces in Africa uses this research as a basis to suggest fundamental changes to basic education which respond to new technological advances and constituencies in learning. Illustrated case studies describe the use of tablets in refugee community schools, hole-in-the-wall learning and shared school community learning spaces. This book will be beneficial for students, academics and those interested in the history of educational architecture and its effect on social development, particularly in Africa and with relevance to countries elsewhere in the emerging world.

Defining Sustainable Development for Our Common Future Iris Borowy, 2013-12-04 The UN World Commission on Environment and Development chaired by former Norwegian Prime Minister Gro Harlem Brundtland alerted the world to the urgency of making progress toward economic development that could be sustained without depleting natural resources or harming the environment. Written by an international group of

politicians civil servants and experts on the environment and development the Brundtland Report changed sustainable development from a physical notion to one based on social economic and environmental issues This book positions the Brundtland Commission as a key event within a longer series of international reactions to pressing problems of global poverty and environmental degradation It shows that its report Our Common Future published in 1987 covered much more than its definition of sustainable development as development that meets the needs of the present without compromising the ability of future generations to meet their own needs for which it became best known It also addressed a long list of issues which remain unresolved today The book explores how the work of the Commission juggled contradictory expectations and world views which existed within the Commission and beyond and drew on the concept of sustainable development as a way to reconcile profound differences The result was both an immense success and disappointment Coining an irresistibly simple definition enabled the Brundtland Commission to place sustainability firmly on the international agenda This definition gained acceptability for a potentially divisive concept but it also diverted attention from underlying demands for fundamental political and social changes Meanwhile the central message of the Commission the need to make inconvenient sustainability considerations a part of global politics as much as of everyday life has been side lined The book thus assesses to what extent the Brundtland Commission represented an immense step forward or a missed opportunity
