shims (26—Fig. AC100) so that the unit rotates freely, yet without perceptible end play.

**211B. Backlash Adjustment.** After adjusting end play adjust bevel pinion-to-ring gear backlash to .003-.014 by removing shims from under one differential bearing carrier and installing them under the opposite bearing carrier. To increase backlash remove

shim from ring gear side and install the same shim to carrier on opposite side. This adjustment should be made after, never before, the bearings have been adjusted as in preceding paragraph.

**212. REVERSE IDLER AND SHAFT.** Reverse idler gear (63—Fig. AC95) and shaft (64) can be removed when-

the torque tube by bumping the shaft out forward, while working through transmission cover opening.

The reverse idler gear rotates on a bronze bushing. Worn bushings are serviced by renewing the gear and bushing as an assembly. Install reverse gear with shifter collar facing rearward.

#### Model G

**213. BASIC PROCEDURES.** Transmission shafts, differential, and the final drive bevel gears are carried in one case. Although most transmission repair jobs involve overhaul of the complete unit, there are infrequent instances where the failed or worn part is so located that the repair work can be completed safely, without complete disassembly of the transmission. In effecting such localized repairs, the mechanic will save time by observing the following as a general guide: Refer to Fig. AC96.

A. On 3 speed transmissions the shifter rails and forks are accessible for overhaul after removing only the battery box and the control (transmission) cover. On 4 speed transmissions the renewal or overhaul of the extra fork and shaft of the extra low gear requires detaching transmission housing from main frame.

B. Main shaft bearings and bevel pinion shaft bearings can be adjusted
