*Extreme Weather and Global Media* Julia Leyda, Diane Negra, 2015-06-05 In the two decades bracketing the turn of the millennium large scale weather disasters have been inevitably constructed as media events As such they challenge the meaning of concepts such as identity and citizenship for both locally affected populations and widespread spectator communities This timely collection pinpoints the features of an often overlooked yet rapidly expanding category of global media and analyzes both its forms and functions Specifically contributors argue that the intense promotion and consumption of extreme weather events takes up the slack for the public conversations society is not having about the environment and the feeling of powerlessness that accompanies the realization that anthropogenic climate change has now reached a point of no return Incorporating a range of case studies of extreme weather mediation in India the UK Germany Sweden the US and Japan and exploring recent and ongoing disasters such as Superstorm Sandy the Fukushima nuclear crisis flooding in Germany and heat waves in the UK *Extreme Weather and Global Media* generates valuable inquiry into the representational and social characteristics of the new culture of extreme weather

*Tempest* Liz Skilton, 2019-06-01 Liz Skilton's innovative study tracks the naming of hurricanes over six decades exploring the interplay between naming practice and wider American culture In 1953 the U S Weather Bureau adopted female names to identify hurricanes and other tropical storms Within two years that convention came into question and by 1978 a new system was introduced including alternating male and female names in a pattern that continues today In *Tempest Hurricane Naming and American Culture* Skilton blends gender studies with environmental history to analyze this often controversial tradition Focusing on the Gulf South the nation's hurricane coast Skilton closely examines select storms including Betsy Camille Andrew Katrina and Harvey while referencing dozens of others Through print and online media sources government reports scientific data and ephemera she reveals how language and images portray hurricanes as gendered objects masculine named storms are generally characterized as stronger and more serious while feminine named storms are described as unladylike and in need of taming Further Skilton shows how the hypersexualized rhetoric surrounding Katrina and Sandy and the effeminate depictions of Georges represent evolving methods to define and explain extreme weather events As she chronicles the evolution of gendered storm naming in the United States Skilton delves into many other aspects of hurricane history She describes attempts at scientific control of storms through hurricane seeding during the Cold War arms race of the 1950s and relates how Roxcy Bolton a member of the National Organization for Women led the crusade against feminizing hurricanes from her home in Miami near the National Hurricane Center in the 1970s Skilton also discusses the skyrocketing interest in extreme weather events that accompanied the introduction of 24 hour news coverage of storms as well as the impact of social media networks on Americans tracking and understanding of hurricanes and other disasters The debate over hurricane naming continues as Skilton demonstrates and many Americans question the merit and purpose of the gendered naming system What is clear is

that hurricane names matter and that they fundamentally shape our impressions of storms for good and bad **The Cost of Globalization** Julian E. fostering a temporary feel good factor is the most that many of these events can ever achieve even though a number are now sold on the popular rhetoric of legacy Drawing upon a range of events and the work of international scholars from a variety of disciplinary backgrounds this collection offers insights into the ways in which events outside of the big two are re positioned as part of the wider sporting landscape The chapters originally published as a special issue in *Sport in Society*

Brooks,2015-08-25 No sooner had the EPA established the Superfund program in 1980 to clean up the nation's toxic waste dumps and other abandoned hazardous waste sites than a little Montana town found itself topping the new program's National Priority List Milltown a place too small to warrant a listing in the U S Census sat alongside a modest hydroelectric dam at the confluence of the Clark Fork and Blackfoot Rivers For three quarters of a century arsenic laced waste from some of the world's largest copper mining operations had accumulated behind the dam Soon Milltown became the site of Superfund's first dam removal and watershed restoration marking a turning point in U S environmental history The story of this dramatic shift is the tale of individuals rallying to reclaim a place they valued beyond its utility In *Restoring the Shining Waters* David Brooks gives an intimate account of how local citizens homeowners university scientists county health officials grassroots environmentalists business leaders and thousands of engaged residents brought about the removal of Milltown Dam Interviews with townspeople outside environmentalists mining executives and federal officials reveal how the everyday actions of individuals got the dam removed and in the process pushed Superfund to allow more public participation in decision making and to emphasize restoration over containment of polluted environments A federal program designed to deal with the toxic legacies of industrialization thus became a starting point for restoring America's most damaged environments

largely through the efforts of local communities With curiosity conviction and a strong sense of place the small town of Milltown helped restore an iconic western river valley and in doing so shaped the history of Superfund and modern environmentalism
