and Environment Engineering CGEEE 2023 held during July 21 23 2023 in Jeju Island Korea Recent studies promising ideas and new challenges are discussed among environmental engineers economists and social scientists demonstrating new paradigms for problem solving and decision making The book provides researchers and practitioners in the field of in green energy and environmental science with the latest cutting edge thought and research in the field It will appeal to readers interested in these fields especially those who are looking for new ideas and research directions Green finance as a critical lever for delivering sustainable agrifood systems – A global landscape study Food and Agriculture Organization of the United Nations,2023-11-14 The global landscape study on Green finance as a critical lever for delivering sustainable agrifood system is an inclusive commentary on the current status of green finance to agrifood sector in the global south and its support system This document provides evidence that the current green finance trends favour the development of the clean energy industry whereas smallholder agriculture has not had the same success Financing the agrifood sector in a business as usual mode is not a sufficient condition to mitigate the risks emanated from a range of climatic shocks and unprecedented events impacting the global food value chains Sustainable financing mechanisms through innovative instruments and business practices are potential solutions and green finance emerges as the way forward to shift the focus from economic profit creation to the generation of stakeholder s value economic environmental and social governance The document presents an excellent opportunity that can help elicit ongoing initiatives application mechanisms and significant issues to build global narratives about developing an inclusive approach to green finance services for the agrifood sector *American Agriculturist* ,1909 *Astronomers as Diplomats* Thierry Montmerle,Danielle Fauque,2022-07-08 This book illuminates a few highly significant events in history in which astronomers have helped keep contacts between astronomers of different states in moments of international political tensions or even crises The chapters written by 20 international authors focus on four periods where astronomers were particularly active in international relations 1 The WWI period the epoch of the creation of the IAU in the context of the simultaneous creation of other scientific unions The book also singles out the important role of A S Eddington and his network across forbidden borders 2 The Cold war period and its consequences when several countries were divided between opposite blocs The China crisis is told here from different viewpoints by Chinese astronomers both from the mainland and from Taiwan in parallel with the evolution of astronomy in South and North Korea Germany s twisted path in its membership of the IAU from its admission in 1951 to its reunification in 1991 is shown as another example 3 The book then highlights a third period when radio astronomers in particular were very active in building bridges between East and West It also tells the history of how the apparently innocuous issue of the lunar nomenclature became extremely sensitive The part ends on two chapters on Russian robotic missions and lunar surface features as well on the Russian participation in the International Virtual Observatory project 4 The fourth part reports for the first time on the hidden story of the relations between the IAU and the United Nations after the Moon race when the United Nations decided

to challenge the IAU's authority on extraterrestrial names. The final chapter reviews how twenty years later UNESCO and the IAU had become strong partners in the difficult but highly successful organization of the International Year of Astronomy 2002-2009 and of the Astronomy and World Heritage initiative 2008.

**Forest Biodiversity, Conservation and Sustainability** Petros Ganatsas, 2021-09-01  
One of the highest priorities for human societies in the 21st century under the challenges of predicted great environmental changes is to conserve all kinds of biodiversity across the planet. Among all the biota that exist on Earth, forest ecosystems demonstrate a high degree of biodiversity, being thought to comprise the most diverse ecosystems as most of the terrestrial species in the world dwell in these ecosystems. Forest biodiversity is interlinked to a web of socio-economic factors providing an array of goods and services that range from timber and non-timber forest resources to mitigating climate change and conservation of genetic resources; therefore, it is innately linked to ecosystems and human well-being. However, in recent decades, the decrease in forest biodiversity has been a crucial and ongoing environmental issue that needs special attention and adapted ecosystem management. This Special Issue book on forest biodiversity (FB) includes a selected number of research works from all over the world dealing with emerging issues for understanding FB and its needs for conservation, ecological processes, disturbances, climate change and ecosystems resilience, structural complexity and ecosystem functions, ecological theories and silvicultural practices and ecosystems stability. More specifically, it includes papers focused on the indicators and methods for assessing and monitoring forest biodiversity, evaluation of practices, planting and silvicultural treatments and management and monitoring methods with an overall goal to provide new insights on forest biodiversity conservation, conservation of forest biodiversity in protected areas, treatments of endangered or threatened forest habitats and sustainable management of forest resources.
