Nancy Kalish is that there is almost no evidence that homework helps elementary school students achieve academic success and little evidence that it helps older students Yet the nightly burden is taking a serious toll on America s families It robs children of the sleep play and exercise time they need for proper physical emotional and neurological development And it is a hidden cause of the childhood obesity epidemic creating a nation of homework potatoes In *The Case Against Homework* Bennett and Kalish draw on academic research interviews with educators parents and kids and their own experience as parents and successful homework reformers to offer detailed advice to frustrated parents You ll find out which assignments advance learning and which are time wasters how to set priorities when your child comes home with an overstuffed backpack how to talk and write to teachers and school administrators in persuasive nonconfrontational ways and how to rally other parents to help restore balance in your children s lives Empowering practical and rigorously researched *The Case Against Homework* shows how too much work is having a negative effect on our children s achievement and development and gives us the tools and tactics we need to advocate for change Also available as an eBook

**Que's Official Internet Yellow Pages** Joe Kraynak, 2005 Information online is not stored or organized in any logical fashion but this reference attempts to organize and catalog a small portion of the Web in a single resource of the best sites in each category. [Arithmetic Counts!](#) Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it. His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains. By teaching the essence of arithmetic in sensible ways and appealing to children's love of games, songs, and movement, he's proven that virtually ALL children can learn arithmetic, the foundation of algebra, higher mathematics, science, technology, and more, even music. When children understand arithmetic, they own it. It's no longer just their teacher's math. It's their math. America's children are being held back in math because of how arithmetic is drug out in elementary school. Virtually every textbook-based elementary school math program in use today is mind-numbing in its repetitiveness from grade to grade. The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized. Research shows that the human brain is not designed to remember things learned by rote when no longer practiced. That's acknowledged in the use-it-or-lose-it aphorism that states the obvious that we remember what we use and forget what we don't. You know that to be true if you've ever forgotten things you once knew as well as your own name, things like an old address or a license plate number. Every child can understand base ten numeration when taught hands-on with arithmetic blocks. Thereby every child can understand base ten arithmetic. And every child can learn how to count out the number facts like 5 + 7 = 12, 17 - 8 = 9, 6 X 7 = 42, and 56 / 7 = 8, and if they forget, one never has to guess and risk ridicule and bad grades if they guess wrong. What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget.
