**The Howling Storm** Kenneth W. Noe, 2020-10-07 Finalist for the Lincoln Prize Winner of the Colonel Richard W Ulbrich Memorial Book Award Traditional histories of the Civil War describe the conflict as a war between North and South Kenneth W Noe suggests it should instead be understood as a war between the North the South and the weather In *The Howling Storm* Noe retells the history of the conflagration with a focus on the ways in which weather and climate shaped the outcomes of battles and campaigns He further contends that events such as floods and droughts affecting the Confederate home front constricted soldiers food supply lowered morale and undercut the government s efforts to boost nationalist sentiment By contrast the superior equipment and open supply lines enjoyed by Union soldiers enabled them to cope successfully with the South s extreme conditions and ultimately secure victory in 1865 Climate conditions during the war proved unusual as irregular phenomena such as El Ni o La Ni a and similar oscillations in the Atlantic Ocean disrupted weather patterns across southern states Taking into account these meteorological events Noe rethinks conventional explanations of battlefield victories and losses compelling historians to reconsider long held conclusions about the war Unlike past studies that fault inflation taxation and logistical problems for the Confederate defeat his work considers how soldiers and civilians dealt with floods and droughts that beset areas of the South in 1862 1863 and 1864 In doing so he addresses the foundational causes that forced Richmond to make difficult and sometimes disastrous decisions when prioritizing the feeding of the home front or the front lines *The Howling Storm* stands as the first comprehensive examination of weather and climate during the Civil War Its approach coverage and conclusions are certain to reshape the field of Civil War studies

**Conspiracies and Conspiracy Theories in American History** Christopher R. Fee, Jeffrey B. Webb, 2019-05-24 This up to date introduction to the complex world of conspiracies and conspiracy theories provides insight into why millions of people are so ready to believe the worst about our political legal religious and financial institutions Unsupported theories provide simple explanations for catastrophes that are otherwise difficult to understand from the U S Civil War to the Stock Market Crash of 1929 to the terrorist attacks on the World Trade Center in New York Ideas about shadowy networks that operate behind a cloak of secrecy including real organizations like the CIA and the Mafia and imagined ones like the Illuminati additionally provide a way for people to criticize prevailing political and economic arrangements while for society s disadvantaged and forgotten groups conspiracy theories make their suffering and alienation comprehensible and provide a focal point for their economic or political frustrations These volumes detail the highly controversial and influential phenomena of conspiracies and conspiracy theories in American society Through interpretive essays and factual accounts of various people organizations and ideas the reader will gain a much greater appreciation for a set of beliefs about political scheming covert intelligence gathering and criminal rings that has held its grip on the minds of millions of American citizens and encouraged them to believe that the conspiracies may run deeper and with a global reach **Tempest** Liz

Skilton,2019-06-01 Liz Skilton's innovative study tracks the naming of hurricanes over six decades exploring the interplay between naming practice and wider American culture In 1953 the U S Weather Bureau adopted female names to identify hurricanes and other tropical storms Within two years that convention came into question and by 1978 a new system was introduced including alternating male and female names in a pattern that continues today In *Tempest Hurricane Naming and American Culture* Skilton blends gender studies with environmental history to analyze this often controversial tradition Focusing on the Gulf South the nation's hurricane coast Skilton closely examines select storms including Betsy Camille Andrew Katrina and Harvey while referencing dozens of others Through print and online media sources government reports scientific data and ephemera she reveals how language and images portray hurricanes as gendered objects masculine named storms are generally characterized as stronger and more serious while feminine named storms are described as unladylike and in need of taming Further Skilton shows how the hypersexualized rhetoric surrounding Katrina and Sandy and the effeminate depictions of Georges represent evolving methods to define and explain extreme weather events As she chronicles the evolution of gendered storm naming in the United States Skilton delves into many other aspects of hurricane history She describes attempts at scientific control of storms through hurricane seeding during the Cold War arms race of the 1950s and relates how Roxcy Bolton a member of the National Organization for Women led the crusade against feminizing hurricanes from her home in Miami near the National Hurricane Center in the 1970s Skilton also discusses the skyrocketing interest in extreme weather events that accompanied the introduction of 24 hour news coverage of storms as well as the impact of social media networks on Americans tracking and understanding of hurricanes and other disasters The debate over hurricane naming continues as Skilton demonstrates and many Americans question the merit and purpose of the gendered naming system What is clear is that hurricane names matter and that they fundamentally shape our impressions of storms for good and bad [The No-Nonsense Guide To Heat Wave, Drought, & Hot Weather Safety \(Enhanced Edition\)](#) Jeffery

Agrawal,2018-03-27 These chapters provide valuable and comprehensive information on a variety of hazards including both scientific and social aspects of disasters The work introduces the concept of large medium and small scale hazards and includes many useful case studies as well as working examples of theoretical concepts As readers will acknowledge today the distinction between natural and technological hazards is becoming blurred and a new concept of NATECH hazards is evolving For permanent hazards such as tides wind waves coastal erosion and climate change routine predictions are made whereas for evanescent hazards including droughts sea level rise and coastal subsidence monitoring of various parameters is the norm Only for episodic hazards for example hurricanes winter storms tsunamis and river floods early warning systems are used with varying degrees of success The book explores how for certain episodic hazards like tornadoes landslides forest fires snow avalanches and volcanic eruptions the early warning systems are still in various stages of development Readers will gain knowledge of theoretical and practical concepts of risk evaluation which assist in better understanding of disaster dynamics and readers will become better equipped in quantification of disaster risk and vulnerability The author explains how risk reduction initiatives taking into account stakeholders participation and perception can provide a roadmap to building resilient communities and cities This book will be useful not only to practitioners of disaster management but also to research scholars and graduate students It is highly readable and will appeal more broadly too to all those who are interested in the very latest thinking on and expert analysis of hazards and disasters *Extreme Weather and Global Media* Julia

Leyda,Diane Negra,2015-06-05 In the two decades bracketing the turn of the millennium large scale weather disasters have been inevitably constructed as media events As such they challenge the meaning of concepts such as identity and citizenship for both locally affected populations and widespread spectator communities This timely collection pinpoints the features of an often overlooked yet rapidly expanding category of global media and analyzes both its forms and functions Specifically contributors argue that the intense promotion and consumption of extreme weather events takes up the slack for the public conversations society is not having about the environment and the feeling of powerlessness that accompanies the realization that anthropogenic climate change has now reached a point of no return Incorporating a range of case studies of extreme weather mediation in India the UK Germany Sweden the US and Japan and exploring recent and ongoing disasters such as Superstorm Sandy the Fukushima nuclear crisis flooding in Germany and heat waves in the UK *Extreme Weather and Global Media* generates valuable inquiry into the representational and social characteristics of the new culture of extreme weather

**Running Buildings on Natural Energy** Sue Roaf,Fergus Nicol,2018-12-07 New thinking is essential if we are to design and occupy buildings that can keep us safe with unpredictable economies climates energy systems and resource challenges For too long designers have relied on mechanical solutions for heating cooling and ventilating buildings The 21st century dream has to be of a better architecture that enables buildings to be run for as much of a day or year as possible on local clean reliable affordable natural energy Examples are included from different climates where the fundamental building

design is right its orientation opening sizes mass and its natural ventilation systems and pathways Many modern buildings are poorly designed for climate as manifested by growing incidences of overheating experienced indoor explored here The inability of many rating systems to record and improve the climatic design of buildings raises questions about how they deal with issues of basic building performance This books points the way towards how we can understand such problems and move forward from over mechanised poorly designed buildings to a new generation of adaptable buildings designed and refurbished to run largely on natural energy and capable of evolving over time to keep their occupants safe and comfortable even in a warming world The chapters were originally published in Architectural Science Review **The Weather**

### **The Kurdish Spring**

David L. Phillips, 2015-02-17 Kurds are the largest stateless people in the world An estimated thirty two million Kurds live in Kurdistan which includes parts of Turkey Iraq Syria and Iran today's hot spots in the Middle East The Kurdish Spring explores the subjugation of Kurds by Arab Ottoman and Persian powers for almost a century and explains why Kurds are now evolving from a victimized people to a coherent political community David L Phillips describes Kurdish rebellions and arbitrary divisions in the last century chronicling the nadir of Kurdish experience in the 1980s He discusses draconian measures implemented by Iraq including use of chemical weapons Turkey's restrictions on political and cultural rights denial of citizenship and punishment for expressing Kurdish identity in Syria and repressive rule in Iran Phillips forecasts the collapse and fragmentation of Iraq He argues that US strategic and security interests are advanced through cooperation with Kurds as a bulwark against ISIS and Islamic extremism This work will encourage the public to look critically at the post colonial period recognizing the injustice and impracticality of states that were created by Great Powers and offering a new perspective on sovereignty and statehood

*China's Belt And Road Initiative, The Eurasian Landbridge, And The New Mega-regionalism* Richard Pomfret, 2019-11-05 This contribution to the World Scientific series on the Belt and Road Initiative focuses on the overland connections west from China the Silk Road Economic Belt component of the BRI It emphasizes the economic underpinning of the Belt in the market driven creation of the Eurasian Landbridge and the linking of regional value chains A fundamental economic driver behind this is the twenty first century evolution of international value chains in which China plays a major role and their transformation by new trade technologies Finer fragmentation of production and wider scanning for participants in value chains underlie the need for common preferably global regulation of new trade technologies and the emergence of mega regional trade agreements and China's response to such agreements Thus the Eurasian part of the Belt and Road Initiative must be seen in conjunction with China's growing role in the twenty first century global economy Especially since the 2016 US presidential election these connections have become entwined with China's reactions to criticisms of the Belt and Road Initiative and China's recognition of the benefits of more nuanced economic diplomacy to find common ground with other economic powers notably the European Union and signatories of the Comprehensive and Progressive Agreement for Trans Pacific Partnership
