**Future Earth** Diana Dalbotten, Gillian Roehrig, Patrick Hamilton, 2014-04-08 Earth now is dominated by both biogeophysical and anthropogenic processes as represented in these two images from a simulation of aerosols Dust red from the Sahara sweeps west across the Atlantic Ocean Sea salt blue rises into the atmosphere from winds over the North Atlantic and from a tropical cyclone in the Indian Ocean Organic and black carbon green from biomass burning is notable over the Amazon and Southeast Asia Plumes of sulfate white from fossil fuel burning are particularly prominent over northeastern North America and East Asia If present trends of dust emissions and fossil fuel burning continues in what we call the Anthropocene epoch then we could experience high atmospheric CO<sub>2</sub> levels leading to unusual warming rarely experienced in Earth's history This book focuses on human influences on land ocean and the atmosphere to determine if human activities are operating within or beyond the safe zones

of our planet's biological, chemical, and physical systems. Volume highlights include: Assessment of civic understanding of Earth and its future; Understanding the role of undergraduate geoscience research and community-driven research on the Anthropocene; Effective communication of science to a broader audience that would include the public, the K-12 science community, or populations underrepresented in the sciences; Public outreach on climate education; geoscience alliance and scientific reasoning; Future Earth is a valuable practical guide for scientists from all disciplines including geoscientists, museum curators, science educators, and public policy makers.

Global Aviation English Research Eric Friginal, Malila Prado, Jennifer Roberts, 2024-11-14. Advocating for best practices within aviation English language research, this volume offers deeper insights into the practical, policy-based, and societal contexts in which International Civil Aviation Organization (ICAO) language standards are embedded. English is the official language for international pilot, air traffic controller (ATC), communications mandated by the ICAO. It is also the de facto universal common language for all other forms of communication, including the language of maintenance technicians and maintenance manuals, aeronautical engineers, cabin crew, ground staff, and aviation business professionals. In this book, renowned academic experts and aviation professionals come together to explore a variety of research trends, providing an effective and efficient analysis of the language needs of the aviation industry, its future directions, and an extended look at linguistic principles in action. Chapters engage in detail with research data, case studies, and concrete examples of interactional tasks, transactional exchanges, and radiotelephony. They also examine the common vocabulary and phrasal patterns in aviation discourse required to communicate successfully in various roles and contexts within the aviation industry. The result is a meaningful contribution to the global development and improvement of standards of aviation research, investigations of the role of language in aviation accidents, and research into language as a human factor in aviation communications, customer service, and intercultural miscommunication.
