*Explorations in Computing* John S. Conery, 2011-06-27 Based on the author s introductory course at the University of Oregon Explorations in Computing An Introduction to Computer Science focuses on the fundamental idea of computation and offers insight into how computation is used to solve a variety of interesting and important real world problems Taking an active learning approach the text

encourages students to explore computing ideas by running programs and testing them on different inputs. It also features illustrations by Phil Foglio, winner of the 2009 and 2010 Hugo Award for Best Graphic Novel. Classroom Tested Material. The first four chapters introduce key concepts such as algorithms and scalability and hone practical lab skills for creating and using objects. In the remaining chapters, the author covers divide and conquer as a problem solving strategy, the role of data structures, issues related to encoding data, computer architecture, random numbers, challenges for natural language processing, computer simulation, and genetic algorithms. Through a series of interactive projects in each chapter, students can experiment with one or more algorithms that illustrate the main topic. Requiring no prior experience with programming, these projects show students how algorithms provide computational solutions to real world problems. Web Resource: The book's website at [www.cs.uoregon.edu/eic](http://www.cs.uoregon.edu/eic) presents numerous ancillaries. The lab manual offers step by step instructions for installing Ruby and the RubyLabs gem with Windows XP, Mac OS X, and Linux. **Criminalistics Laboratory Manual** Elizabeth Erickson, 2012-12-31  
Criminalistics Laboratory Manual provides students who have little to no prior knowledge of forensic science with a practical crime scene processing experience. The manual starts with an original crime scene narrative setting up the crime students are to solve. This narrative is picked up in each of the 17 forensic science lab activities, tying all forensic disciplines together to show the integrated workings of a real crime lab. The lab activities cover fingerprints, blood typing and spatter analysis, hair and fiber, digital forensics, and more. After completing all of the exercises, the student will be able to solve the homicide based on forensic evidence. Each chapter also includes an introduction to the type of forensic evidence covered and practice exercises and key definitions prepare students for the laboratory exercise. While fitting in with the larger crime scene narrative, the individual chapters are written so that they can be used separately, giving instructors flexibility. Original crime scene scenario engages students, drawing them into the forensic scientific process. Practical hands on crime scene processing activities with clear detailed instructions for how to perform each laboratory exercise. Laboratory objectives, key terms, review questions, and glossary of terms keep the student focused on what's important. No forensic science lab required. Alternative materials and equipment are suggested if a science lab is not available. [Lab Manual to Accompany Access Control, Authentication, and Public Key Infrastructure](#) Bill Ballard, 2011.
