

Website Review. Paper Example Essay

Due to the continuous technological improvements, most organizations and institutions have been forced to create websites that are used to communicate or pass a particular message to a specific population. A website is considered to be a collection of web pages that are usually identified mainly by a common or specific domain name and published by at least one website server. Websites are considered to be of great benefit, particularly in the healthcare field, due to their tremendous effort to address the various diseases and disorders affecting the population, such as the attention hyperactive activity disorder. These websites tend to provide interesting and valuable information and deep insight into the topic. For instance, the website tends to explain the condition, its cause, diagnosis, and treatment. Although most websites have taken the initiative of talking about this condition, it is usually very hard to find a website that is providing a proper insight into the topic and also using other apparatus such as collaborating with other organizations to improve the wellbeing of the affected individuals. This paper intends to review a website that focuses on diseases and disorders such as attention hyperactivity disorder and identify criteria that the general public considered acceptable.

Criteria That the Public Would See as Acceptable For a Website That Talks About Diseases and Disorders.

There are numerous websites that usually focus their ideas and agendas on diseases and disorders affecting the population, such as attention hyperactivity disorder. These websites usually try to educate a large number of people who have been either affected or at risk of being affected by the attention hyperactivity disorder. However, for a website to gain support or have a wide number of followers who are willing to learn about the attention hyperactivity disorder, the website is usually required to meet a set of criteria. The set of criteria that is usually considered acceptable by the population for such websites include, first, the website should provide current information concerning the condition. Most website tend to take a lot of time before they update the information that they intend to pass to the population. This makes the information to be outdated and irrelevant to the people. The websites should update the statistical and the prevalence of the condition at least after every six months or after every one year (Gidron et al., 2020). The aim of updating this information is to ensure that the population is getting valuable information that they can depend on.

Secondly, the objectivity of the websites should not be closed; instead, it should be broad. The information being communicated on the website should not be only from the organization or institution; instead, it should include information from other vital sources that communicate a similar message. Such information helps the targeted individual to know where they can get alternative treatment or where they can get similar services. The website owners are therefore required to collaborate or partner with other organizations or institutions that they share similar goals or objectives in order to make it easy to advertise their information (Kofler et al., 2020, p56). Thirdly, the information that is presented on the website should be authored by a large team or group of health professionals. Depending on a huge team usually helps the organization to come up with a clear and conclusive message. On the other hand, in case the organization allows only one person to author the information. The website followers may not grasp the intended message.

Poetry Translating as Expert Action Francis R. Jones,2011-07-20 Poetry is a highly valued form of human expression and poems are challenging texts to translate For both reasons people willingly work long and hard to translate them for little pay but potentially high personal satisfaction This book shows how experienced poetry translators translate poems and bring them to readers and how they not only shape new poems but also help communicate images of the source culture It uses cognitive and sociological translation studies methods to analyse real data most of it from two contrasting source countries the Netherlands and Bosnia Case studies including think aloud studies analyse how translators translate poems In interviews translators explain why and how they translate And a 17 year survey of a country s poetry translation output explores how translators work within networks of other people and texts publishing teams fellow translators source culture enthusiasts and translation readers and critics In mapping the whole sweep of poetry translators action from micro cognitive to macro social this book gives the first translation studies overview of poetry translating since the 1970s

The Science of Web Surveys Roger Tourangeau,Frederick G. Conrad,Mick P.

Couper,2013-03-29 The development and widespread use of Web surveys have resulted in an outpouring of research on their design In this volume Tourangeau Conrad and Couper provide a comprehensive summary and synthesis of the literature on this increasingly popular method of data collection The book includes new integration of the authors work with other important research on Web surveys including a meta analysis of studies that compare reports on sensitive topics in Web surveys with reports collected in other modes of data collection Adopting the total survey error framework the book examines sampling and coverage issues nonresponse measurement and the issues involved in combining modes In addition the concluding chapter provides a model for understanding the errors in estimates that combine data collected in more than one mode Web surveys have several important characteristics that affect their ability to collect accurate survey data Discussing these in detail the authors address basic design decisions from input widgets to background colors They additionally focus on the visual character of Web surveys on their ability to automatically interact with respondents and on the Web as a method of self administration The Science of Web Surveys is relevant for those with the practical goal of improving their own surveys

Should other information such as paper downloads be included in the evaluation? How can scientific objectivity be strengthened and political motivations weakened in the future system? Should the system include signed and authenticated reviews and ratings? Should the evaluation be an ongoing process such that promising papers are more deeply evaluated? How can we bring science and statistics to the evaluation process? e.g. should

rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point How to Write and Publish a Scientific Paper Barbara Gastel, Robert A.
