

Weight, Friction, and Equilibrium

Weight

Weight is the force of gravity on mass.

There is the upward vector (normal) and downward of weight.

Weight changes if gravity changes; mass does not change with gravity.

The acceleration of gravity is constant (9.8 m/s²) on Earth. Weight is the force of gravity on mass. Weight is the force of gravity on mass.

On the moon, you would weigh 1/6th your weight on Earth. Because the moon's gravity is 1/6th that of Earth's. A 60 kg person would weigh 100 N on the moon.

Ex. What is the weight of a 2 kg mass?

Question: 2 kg is m g = 9.8 m/s² F _w = ?	Equation: F _w = m * g Below: F = (2 kg)(9.8 m/s²) F = 19.6 N
--	---

Ex. What is the mass of a 200 N mass?

Question: g = 9.8 m/s² 200 N = F _w m = ?	Equation: F _w = m * g Below: m = (200 N) / (9.8 m/s²) m = 20 kg
--	--

If you know mass, you can find weight. If you know weight, you can find mass.

F_w = m * g. Effects give the correct balance between weight and mass.

Free Fall and the Acceleration

Do heavy things fall faster? NO! They fall at the same rate.

Heavy and light object fall at the same rate.

g is a constant = 9.8 m/s². The acceleration of all falling objects is the same.

But you know that a feather will fall slower than a hammer. Why? Because the feather has more air resistance.

Friction

Friction is caused by two things moving against each other.

Friction always opposes motion.

Friction causes things to slow down and causes heat, so we use lubricants to reduce friction.

Net Force = 100N - 20N = 80N (right)

Effects of Friction: things move slower, things stop, things get hot, things get worn out.

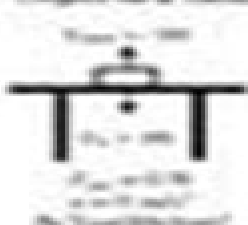

Equilibrium (State of Equilibrium)

An equilibrium the following are true:

F_{net} = 0 N (no net force)
 a = 0 m/s² (no acceleration)
 An object is moving at a constant speed.

An object at rest is also in equilibrium with a constant speed of 0 m/s.

Object on a Table

Object at Constant Speed
