Defect Evolution in Cosmology and Condensed Matter C.J.A.P. Martins, 2016-09-03 This book sheds new light on topological defects in widely differing systems using the Velocity Dependent One Scale Model to better understand their evolution Topological defects cosmic strings monopoles domain walls or others necessarily form at cosmological and condensed matter phase transitions If they are stable and long lived they will be fossil relics of higher energy physics Understanding their behaviour and consequences is a key part of any serious attempt to understand the universe and this requires modelling their evolution The velocity dependent one scale model is the only fully quantitative model of defect network evolution and the canonical model in the field This book provides a review of the model explaining its physical content and describing its broad range of applicability

**How Molecular Forces and Rotating Planets Create Life** Jan Spitzer, 2021-02-09 A reconceptualization of origins research that exploits a modern understanding of non covalent molecular forces that stabilize living prokaryotic cells Scientific research into the origins of life remains exploratory and speculative Science has no definitive answer to the biggest questions What is life and How did life begin on earth In this book Jan Spitzer reconceptualizes origins research by exploiting a modern understanding of non covalent molecular forces and covalent bond formation a physicochemical approach propounded originally by Linus Pauling and Max Delbrück Spitzer develops the Pauling Delbrück premise as a physicochemical jigsaw puzzle that identifies key stages in life's emergence from the formation of first oceans tidal sediments and proto biofilms to progenotes proto cells and the first cellular organisms

*Galaxy Formation* Malcolm S. Longair, 2013-03-14 For Deborah Mark and Sarah Not another book on cosmology I hear the reader exclaim Surely there are quite enough books on cosmology to satisfy everyone's needs I was asked by Springer Verlag to expand into a full length book the set of lecture notes that I prepared in 1988 for the First Astrophysics School organised by the European Astrophysics Doctoral Network The set of notes was entitled *Galaxy Formation* and was published as a chapter of the volume *Evolution of Galaxies Astronomical Observations* eds 1 Appenzeller H J Habing and P Lena pages 1 to 93 Springer Verlag Berlin Heidelberg 1989 In that chapter I attempted to bridge the gap between elementary cosmology and the technical papers appearing in the literature which can seem quite daunting on first encounter The objective was to present the physical concepts and key results as clearly as possible as an introduction and guide to the technical literature The revision of these lecture notes into a full length book was delayed by other projects Specifically I am completing a three volume work for Cambridge University Press entitled *High Energy Astrophysics* Volume 1 1992 Volume 2 1994 Volume 3 Cambridge University Press Cambridge 1998 In addition a further series of lecture notes on *The Physics of Background Radiation* was prepared for the 1993 23rd Advanced Course of the Swiss Society of Astrophysics and Astronomy the topic of which was *The Deep Universe* A R Sandage R G Kron and M S

*High Energy Astrophysics: Volume 2, Stars, the Galaxy and the Interstellar Medium* M. S. Longair, Malcolm S. Longair, 1992 What role does viscosity play in accretion discs How do you calculate the glitch function of a pulsar And can strong shocks account for the energy spectrum of electrons in our Galaxy These are just some of the exciting questions that Professor Longair uses to develop the physics needed by the astronomer and high energy astrophysicist The highly acclaimed first edition of *High Energy Astrophysics* instantly established itself as a classic in the teaching of contemporary astronomy Reflecting the immense interest and developments in the subject Professor Longair has developed the second edition into three texts in this second volume he provides a comprehensive discussion of the high energy astrophysics of stars the Galaxy and the interstellar medium He develops an understanding for the essential physics with an elegance and infectious enthusiasm for which his teaching is internationally

renowned illustrating the issues throughout with results from forefront research This book takes the student with a knowledge of physics and mathematics at the undergraduate level but not necessarily with training in astronomy to the point where current astronomical research can be understood     *Modern Physics and Ancient Faith* Stephen M. Barr, 2003

Modern Physics and Ancient Faith argues that modern physics is more compatible with the central teachings of Christianity and Judaism than with the atheistic viewpoint of scientific materialism
