Coulomb's low allows us to find the force between two point charges.

Three point charges are held fixed in place as shown.

+0 +9 -0

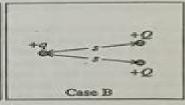

Consider the following comment about this situation:

"There will be zero not electric force on the charge in the middle due to the other charges. Using Coulomb's law, the force due to the +Q charge is positive, and the force due to the -Q charge is negative. The forces cancel."

- a. Do you agree with this statement? Explain.
- b. How does Coulomb's law apply to situations in which there are more than two point charges?
- Each of the following parts involves a comparison of the net electric force exerted on a positive charge +q in two different cases.
 - a. In cases A and B shown at right there are two positive point charges +Q each a distance s away from a third positive point charge +q.

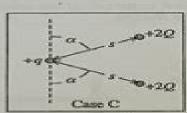

Is the net electric force on the +q charge in case A greater than, less than, or equal to the net electric force on the +q charge in case B? Explain.

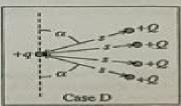

b. In case C, two positive point charges +2Q are each a distance s away from a third positive point charge +q. In case D, four positive point charges +Q are each a distance s away from a fifth positive point charge +q. (The angle α shown is the same in both cases.)

Is the net electric force on the +q charge in case C greater than, less than, or equal to the net electric force on the +q charge in case D? Explain.
