

- 1 A light see-saw is 10 m long with the pivot 3 m from the left.

Figure 1

- A 4 kg weight is placed on the left-hand end of the see-saw. Write down the anticlockwise moment about the pivot. (3 marks)
  - A force of magnitude  $F$  N is applied to the right-hand end of the see-saw. The force acts vertically downwards. Write down the clockwise moment about the pivot due to this weight. (1 mark)
  - Find the value of  $F$  for which the system is in equilibrium. (3 marks)
- 2 Alice, who weighs 50 kg, sits on the right-hand end of a light see-saw. Bob, who weighs 80 kg, stands on the opposite side at a distance  $x$  m from the end. The length of the see-saw is 4 m and it pivots about its centre.

Figure 2

- Draw a diagram showing the forces acting on the see-saw due to the two people. Label the value of each force in newtons. (2 marks)
- Write down the total clockwise moment about the centre in terms of  $x$ . (5 marks)
- Find the value of  $x$  for which the see-saw is in equilibrium. (2 marks)
- Given that Bob remains on the opposite side to Alice, describe with inequalities the range of  $x$  for which the see-saw tilts towards Alice. (2 marks)
- Describe one limitation of this model. (1 mark)

**Operations Research Using Excel** Vikas Singla, 2021-09-16 The field of operations research provides a scientific approach to managerial decision making In a contemporary hypercompetitive ever changing business world a manager needs quantitative and factual ways of solving problems related to optimal allocation of resources profit loss maximization minimization etc In this endeavor the subject of doing research on how to manage and make operations efficient is termed as Operations Research The reference text provides conceptual and analytical knowledge for various operations research techniques Readers especially students of this subject are skeptic in dealing with the subject because of its emphasis on mathematics However this book has tried to remove such doubts by focusing on the application part of OR techniques with minimal usage of mathematics The attempt was to make students comfortable with some complicated topics of the subject It covers important concepts including sensitivity analysis duality theory transportation solution method Hungarian algorithm program evaluation and review technique and periodic review system Aimed at senior undergraduate and graduate students in the fields of mechanical engineering civil engineering industrial engineering and production engineering this book Discusses extensive use of Microsoft Excel spreadsheets and formulas in solving operations research problems Provides case studies and unsolved exercises at the end of each chapter Covers industrial applications of various operations research techniques in a comprehensive manner Discusses creating spreadsheets and using different Excel formulas in an easy to understand manner Covers problem solving procedures for techniques including linear programming

transportation model and game theory      **The Coupled Theory of Mixtures in Geomechanics with Applications** George Z Voyiadjis, C.R. Song, 2006-08-06 Geomaterials consist of a mixture of solid particles and void space that may be filled with fluid and gas. The solid particles may be different in sizes, shapes and behavior and the pore liquid may have various physical and chemical properties. Hence physical, chemical or electrical interaction between the solid particles and pore fluid or gas may take place. Therefore the geomaterials in general must be considered a mixture or a multiphase material whose state is described by physical quantities in each phase. The stresses carried by the solid skeleton are typically termed effective stress while the stresses carried by the pore liquid are termed pore pressure. The summation of the effective stress and pore pressure is termed total stress. Terzaghi 1943. For a free drainage condition or completely drained condition the pore pressure change is zero or depends only on the initial stress condition; it does not depend on the skeleton response to external forces. Therefore a single phase description of soil behavior is adequate. For an intermediate condition, however, some pore pressure leak may take place while the force is applied and the skeleton is under deformation. Due to the leak of pore pressure, the pore pressure changes with time and the effective stress changes and the skeleton deforms with time accordingly. The solution of this intermediate condition therefore requires a multi phase continuum formulations that may address the interaction of solid skeleton and pore liquid interaction.      *Operations research* Dr. R.K. Gupta, 1992      Knowledge-Based System Diagnosis, Supervision, and Control S.G. Tzafestas, 2013-11-22 It is in the area of Systems Diagnosis, Supervision and Control that Knowledge Based Techniques have had their most significant impact in recent years. In this volume Spyros Tzafestas has ably put together the current state of the art of the application of Artificial Intelligence concepts to problems of Systems Diagnosis. All the authors in this edited work are distinguished internationally recognized experts on various aspects of Artificial Intelligence and its applications and the coverage of the field that they provide is both readable and authoritative. The sixteen chapters break down in a natural way into three broad categories: i.e. a introduction to the applications of Expert Systems in Engineering; b Knowledge based systems architectures, models and techniques for fault diagnosis, supervision and real time control; and finally c applications and case studies in three specific areas namely Manufacturing, Chemical Processes and Communications Networks. The final chapter provides a comprehensive survey of the field with an extensive bibliography. The mix of original scientific articles, tutorial and survey papers makes this collection a very timely and valuable addition to the literature in this important field.
