Teaching Introductory Physics to Visually Impaired Learners Antônio Carlos Fontes dos Santos, Marcio Velloso da Silveira, 2025-09-30 Following global inclusion policies and initiatives more students with visual impairments are attending regular education in inclusive schools Universities also increasingly accept students with visual impairments in the most varied courses including engineering and physics However teachers do not always have experience with teaching this specific audience Teaching Introductory Physics to Visually Impaired Learners provides a gateway to understanding the difficulties encountered by this audience and provides ways for teachers to embrace this challenge The concept of inclusion is discussed in light of the historical evolution of the achievements of people with disabilities and the development of reading and writing in Braille in addition to other more modern tools such as cell phone applications. The remaining chapters present methodologies for teaching mechanics waves electrodynamics optics and modern physics in classes where there are one or more students with visual impairments. The main target audience for this book is elementary and higher education physics teachers and researchers. This book is also of great value to anyone including teachers from other areas and students with visual impairments who are looking for teaching materials that facilitate learning for people with visual impairments Key Features The first book to help readers understand the difficulties of inclusive physics teaching for students with visual impairment Allows the reader to have a broader view of what visual impairment is bringing together theoretical tools necessary to value and promote inclusive education Encourages the reader to reproduce the physics teaching methodology with low cost materials which facilitates its implementation in the classroom Research on Physics Education E.F. Redish, M. Vicentini, 2004-08-09 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice. On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the

interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment and cultural aspects Information is also given on the organizations involved in connecting various aspects of Physics Education the International Commission on Physics Education the European Physical Society and the European Physics Education Network
