Teaching and Learning Online Franklin S. Allaire, Jennifer E. Killham, 2022-04-01 Science is unique among the disciplines since it is inherently hands on. However, the hands on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we as science teachers deliver high quality experiences in an online environment that leads to age grade level appropriate science content knowledge and literacy but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning, Killham et al 2014, Wong et al 2018, PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments, Molnar et al 2021, Seaman et al 2018. This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy. Brigid Borrachero Bermejo, Gunning Duran, Duran 2004. Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation. **Multimodality, Digitalization and Cognitivity in Communication and Pedagogy** Natalya V. Sukhova, Tatiana Dubrovskaya, Yulia A. Lobina, 2021-10-21 This book positions itself at the intersection of the key areas of the modern humanities. Different authors from a variety of countries take innovative approaches to investigating multimodal communication, adapting pedagogical design to digital environments and enhancing cognitive skills through transformations in teaching and learning practices. The eclectic forms under study require eclectic approaches and methodologies, and the authors cross disciplinary boundaries, drawing on philosophy, linguistics, semiotics, computational linguistics, mathematics, cognitive studies, and neuroaesthetics. Part I presents methods of analysing multimodal communication in its different displays, covering promotional video in crowdfunding project presentations, multimodal public signs of prohibition and visuals as arguments. Part II explores varied teaching methodologies that have emerged as a result of and in response to modern technological changes and contains some practical hints for educators. It demonstrates the pedagogical potential of video games, virtual worlds, linguistic corpora, and online dictionaries. Part III focuses on psychological and cognitive factors influencing success in the classroom, primarily ways of developing students and teachers' personalities. The volume sits at the intersection between Communication Studies, Digital Humanities, Discourse Analysis, Education Theory, and Cognitive Studies and is useful to scholars and students of communication, languages, education, and other areas of the humanities. This book should trigger scholarly discussions as well as stimulating practitioners' interest in these fields. **Proceedings of The 14th IAC 2019** group of authors, 2019-04-18 EASTER CONFERENCE The 14th International Academic Conference in Prague 2019, Czech Republic.
