

Free Particle Model Worksheet 1b Force Diagrams and Component Forces

For each of the following situations, separate the object with a particle. Identify all the forces acting upon the object, including the weight. Write down important characteristics of the forces (direction, magnitude, etc.) as indicated. Please include an important characteristic for each.

1. Draw a free-body diagram for the person on the cliff. Label the forces and any significant characteristics of the forces.

2. Draw a free-body diagram for the ball and ball. Note that the ball is not on the edge. Label the forces and any significant characteristics of the forces.

3. Draw a free-body diagram for the ball. The ball is being pushed away from the stick figure. Label the forces and any significant characteristics of the forces.

Sher,R.J.

Daverman,2001-12-20 Geometric Topology is a foundational component of modern mathematics involving the study of spacial properties and invariants of familiar objects such as manifolds and complexes This volume which is intended both as an introduction to the subject and as a wide ranging resouce for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research They provide the reader with an up to date overview of this flourishing branch of mathematics *Algebraic Curves and Their Applications* Lubjana Beshaj,Tony

Shaska,2019-02-26 This volume contains a collection of papers on algebraic curves and their applications While algebraic curves traditionally have provided a path toward modern algebraic geometry they also provide many applications in number theory computer security and cryptography coding theory differential equations and more Papers cover topics such as the rational torsion points of elliptic curves arithmetic statistics in the moduli space of curves combinatorial descriptions of semistable hyperelliptic curves over local fields heights on weighted projective spaces automorphism groups of curves hyperelliptic curves dessins d enfants applications to Painlev equations descent on real algebraic varieties quadratic residue codes based on hyperelliptic curves and Abelian varieties and cryptography This book will be a valuable resource for people interested in algebraic curves and their connections to other branches of mathematics *7 Algorithm Design Paradigms*

Sung-Hyuk Cha,2020-06-01 The intended readership includes both undergraduate and graduate students majoring in computer science as well as researchers in the computer science area The book is suitable either as a textbook or as a supplementary book in algorithm courses Over 400 computational problems are covered with various algorithms to tackle them Rather than providing students simply with the best known algorithm for a problem this book presents various algorithms for readers to master various algorithm design paradigms Beginners in computer science can train their algorithm design skills via trivial algorithms on elementary problem examples Graduate students can test their abilities to apply the algorithm design paradigms to devise an efficient algorithm for intermediate level or challenging problems Key Features Dictionary of computational problems A table of over 400 computational problems with more than 1500 algorithms is provided Indices and Hyperlinks Algorithms computational problems equations figures lemmas properties tables and theorems are indexed with unique identification numbers and page numbers in the printed book and hyperlinked in the e book version Extensive Figures Over 435 figures illustrate the algorithms and describe computational problems Comprehensive exercises More than 352 exercises help students to improve their algorithm design and analysis skills The
