For the following questions, select the best answer from the options and use the given lines to mark your choice.

1. A car requires an initial velocity above the speed limit. This suggests gravitational energy.

Initial velocity is at the top of the hill.

2. An object's initial velocity is represented by the arrow. It

indicates that it has a force of constant motion due to
kinetic energy. Since kinetic energy does not
have a constant value, the object is decelerating.

Kinetic energy is not constant in this situation.

3. The ball's final velocity would be greater than its initial velocity because it
loses its energy as the height against disappears in the process, causing the object to gain it.

Gravitational potential energy is lost in the process of the ball's decrease in height.

The ball's velocity is increasing.

4. Since the ball's initial velocity remains constant, according to both Newton's laws, the ball's initial kinetic energy will continue throughout its flight path.

The ball's kinetic energy is constant throughout its flight path.

Question 5: If there were no external forces of energy, there would have high initial energy and a constant amount of energy.

Initial energy is constant.

5. If the ball's initial energy was equal to zero, it would not continue the motion due to friction.
