Abiotic stresses are known to adversely impact agricultural productivity on millions of hectares globally and it is projected that these problems are likely to increase primarily due to anthropogenic interventions as well as climatic changes. Understanding abiotic stresses especially salt stress on soil calls for an interdisciplinary approach because salt stressed soils need hydro technical chemical and agronomic interventions as well as an understanding of plant response when exposed to these stresses. This volume explores and conveys the latest information on emerging technologies in the management of abiotic salt stress and their field applications. It brings together experts from various fields academia technology and engineering to provide the latest information and knowledge on this important challenge.

*A Solution to the Crises of Soil, Water, and Climate in Plant Production* Imran, 2023-07-25

This book contains information on solutions to soil water and environmental issues. The deterioration of fertile soil fresh clean water and hygienic and green environments for many reasons have created concerns among the scientific community. Soil water and the environment are threatened by chemical applications pesticides and fertilizers for example natural disasters erosion volcanic eruptions etc and other anthropogenic activities GHG emission deforestation urbanization and more. Life is dependent on these resources. If the soil is lost from where can we produce food? If water is lost how will life persist? If the environment is not clean how will living beings humans animals and birds survive? This book demonstrates critical thinking about how we might save these precious resources.

*Advances in Seed Priming* Amitava Rakshit, Harikesh Bahadur Singh, 2018-06-07 Most crop plants grow in environments that are suboptimal which prevents the plants from attaining their full genetic potential for growth and reproduction Stress due to abiotic and biotic agents has a significant effect on world food production Annually an estimated 15% of global yields are lost but this figure belies far greater losses for specific food systems and the people whose existence is dependent upon them particularly in developing countries Current efforts to mitigate these losses are worryingly over reliant on the use of sophisticated and costly chemicals measures with substantial economic and environmental costs or on the development of efficient and smart crop varieties which can take decades What we need is a broad range of safe

robust and equitable solutions for food producers One under investigated approach is that of utilizing the crop plant's innate immune system to resist stress More specifically the innate immune system can be sensitized or primed to respond more quickly and strongly to protect the plant against stresses However a strategy of employing priming in combination with reduced pesticide use can enhance protection and help to meet commitments to reducing chemical inputs in agriculture This book discusses in detail different segments of priming in addressing stress factors and traits to increase competitiveness against all odds Adopting a holistic and systematic approach it addresses priming to counter climate change related adverse effects coupled with pest and pathogen related stress on the productivity of crops utilizing natural resources to reap sustainable environmental economic and social benefits for potential productivity of crops maintaining synergy between soil water and plants in ways that mimic nature
