Gerhard Bruyns, Huaxin Wei, 2022-11-05. This collection stems from the International Association of Societies of Design Research (IASDR) congress in 2021, promoting the research of design in its many fields of application. Today's design finds itself at a critical moment where the conventional modes of doing thinking and application are increasingly challenged by the troubled ideology of globalisation, climate change, migration patterns, and the rapid restructuring of locally driven manufacturing sectors. The volume presents a selection of papers on state-of-the-art design research work. As rapid technological development has been pushing and breaking new ground in society, the broad field of design is facing many unprecedented changes. In combination with the environmental, cultural, technological, and crucially, pandemic transitions, design at large is called to fundamentally alter its modes of practice. Beyond the conventional models of conducting research or developing solutions to wicked problems, the recoupling of design with different modes should be seen as an expression to embrace other capacities of thinking, criticisms, and productions. This selection of proceedings papers delivers the latest insights into design from a multitude of perspectives, as reflected in the eight thematic modes of the congress: i.e., social, making, business, critical, historical, projective, impact, pandemic, and alternative, with design modes. The book benefits design researchers from both academia and industry who are interested in the latest design research results, as well as in innovative design research methods. In presenting an interesting corpus of design case studies, as well as studies of

design impact this comprehensive collection is of relevance to design theorists and students as well as scholars in related fields seeking to understand how design plays a critical role in their respective domains Official Gazette of the United States Patent and Trademark Office United States.
