with Rare Earth Elements REE especially with neodymium used in permanent magnets from a very scientific basis by  
providing basic research data Despite the fact that REE are newsworthy and very important elements for a considerable  
bandwidth of today's technologies accompanied by the monopolistic supply situation and Chinese politics there are  
inexplicable data discrepancies about REE which have been recognized frequently but usually have not been addressed  
accordingly So this analysis started with the hypothesis that the four application areas namely computer hard disk drives  
HDD mobile phones wind turbines and e mobility automotive traction account for about 80% of the global annual neodymium  
demand The research methodology was a laboratory analysis of the composition of used magnets for HDDs and mobile  
phones and a literature and official report analysis of wind turbine and automotive neodymium use The result was amazing  
and the hypothesis had to be withdrawn as these four areas only account for about 20% of neodymium use This result raises  
some questions concerning actual use and thus potential recycling options **Popular Science** ,1987-05 Popular Science
