Young (Deceased), 2003-09-04 Cephalopods are fast moving voracious predators and can change colour with breath taking rapidity They range from the giant squid the world s largest marine invertebrate to species of only 2 cm in length Inhabitants of most seas of the world they are found from the surface to great depths Most cephalopods have short lives yet their efficiency in capturing and consuming prey ensures rapid growth These animals possess highly developed nervous systems large brains elaborate senses complex behaviour and are capable of learning Many of these features are described and illustrated with line drawings and photomicrographs      *Surgery of Exotic Animals* R. sensitive and controls camouflage an extraordinary ability almost exclusive to all cephalopods they are capable of rapidly adapting their body coloration as well as altering their body shape to any background in almost any condition and even during self motion Visual scene analysis ultimately leads to motor outputs that cause an appropriate change in skin coloration or texture by acting directly on chromatophores or papillae in the skin Mirroring these numerous functions of the visual system large parts of the cephalopod brain are devoted to the processing of visual information This research topic focuses on current advances in the knowledge of cephalopod vision It is designed to facilitate merging questions approaches and data available through the work of different researchers working on different aspects of cephalopod vision Thus the research topic creates mutual awareness and facilitates the growth of a field of research with a long tradition cephalopod vision visual perception and cognition as well as the mechanisms of camouflage This research topic emerged from a workshop on Vision in cephalopods as part of the COST Action FA1301
