and the National Flood Insurance Program* National Research Council,Division on Earth and Life Studies,Water Science and
Technology Board,Committee on Levees and the National Flood Insurance Program: Improving Policies and
Practices,2013-07-18 The Federal Emergency Management Agency s FEMA Federal Insurance and Mitigation Administration
FIMA manages the National Flood Insurance Program NFIP which is a cornerstone in the U S strategy to assist communities
to prepare for mitigate against and recover from flood disasters The NFIP was established by Congress with passage of the
National Flood Insurance Act in 1968 to help reduce future flood damages through NFIP community floodplain regulation
that would control development in flood hazard areas provide insurance for a premium to property owners and reduce
federal expenditures for disaster assistance The flood insurance is available only to owners of insurable property located in
communities that participate in the NFIP Currently the program has 5 555 915 million policies in 21 881 communities³
across the United States The NFIP defines the one percent annual chance flood 100 year or base flood floodplain as a Special
Flood Hazard Area SFHA The SFHA is delineated on FEMA s Flood Insurance Rate Maps FIRM s using topographic
meteorologic hydrologic and hydraulic information Property owners with a federally back mortgage within the SFHAs are
required to purchase and retain flood insurance called the mandatory flood insurance purchase requirement MPR Levees and
floodwalls hereafter referred to as levees have been part of flood management in the United States since the late 1700 s
because they are relatively easy to build and a reasonable infrastructure investment A levee is a man made structure usually
an earthen embankment designed and constructed in accordance with sound engineering practices to contain control or
divert the flow of water so as to provide protection from temporary flooding A levee system is a flood protection system
which consists of a levee or levees and associated structures such as closure and drainage devices which are constructed and
operated in accordance with sound engineering practices Recognizing the need for improving the NFIP s treatment of levees
FEMA officials approached the National Research Council s NRC Water Science and Technology Board WSTB and requested
this study The NRC responded by forming the ad hoc Committee on Levee and the National Flood Insurance Program
Improving Policies and Practices charged to examine current FEMA treatment of levees within the NFIP and provide advice
on how those levee elated policies and activities could be improved The study addressed four broad areas risk analysis flood
insurance risk reduction and risk communication regarding how levees are considered in the NFIP Specific issues within
these areas include current risk analysis and mapping procedures behind accredited and non accredited levees flood
insurance pricing and the mandatory flood insurance purchase requirement mitigation options to reduce risk for
communities with levees flood risk communication efforts and the concept of shared responsibility The principal conclusions

and recommendations are highlighted in this report **Truckee Meadows, Nevada** United States.
