Cellular and Molecular Biology of Intermediate Filaments R.D. Goldman, P.M. Steinert, 2013-06-29 Research activity on intermediate filaments IF has increased dramatically over the past decade For the most part this surge of interest is due to their identification as ubiquitous constituents of the cytoskeleton and karyoskeleton nuclear matrix of eukaryotic cells and the fact that we know very little regarding their functions In sharp contrast to the other major cytoskeletal systems microfilaments and microtubules IF exhibit a high degree of heterogeneity with regard to their protein subunit composition Indeed one can only marvel at the number of different IF polypeptides their

associated proteins IFAP and consequently the number of genes involved in encoding the multiple constituents of the various IF networks found in different cell types The chapters in this book demonstrate how various experimental approaches involving cellular molecular biochemical and immunological methods have been utilized to generate information regarding the structure and function of IF To this end we have gathered together chapters from experts in the major fields of IF research In each chapter the authors have combined reviews of the available scientific literature with their own ideas on current and future directions for IF research The chapters have been divided into five major sections which are concerned with the subcellular organization of IF the molecular structure of IF the differential expression of IF genes descriptions of associated proteins involved in the intracellular organization of IF and finally an analysis of the changes seen in IF in pathological conditions

Intermediate Filament Cytoskeleton M. Bishr Omary, Pierre A. Coulombe, 2004-12-02 Intermediate filaments are a large family of proteins that are the cytoskeletal elements involved in a number of skin liver neuromuscular cardiac eye and hair diseases Intermediate filament genes are regulated in a tissue and cell type specific manner and their polymerized protein products protects the cells and tissue they are part of against a variety of mechanical and nonmechanical stresses This book provides a comprehensive resource of methodology essentials describing a variety of essential tools and assays for studying intermediate filaments The book provides user friendly advice and protocols covering all aspects of intermediate filaments including protein isolation and structure protein and gene regulation relationship to disease and apoptosis and associated proteins Both mammalian and non mammalian systems and animal models are covered making this book a must have for any investigator wishing to study IF genes or their protein products Covers intermediate filaments from crystallography protein chemistry cell and molecular biology microrheology gene regulation to animal models and human disease Practical and user friendly with detailed how to protocols and tricks of the trade Includes detailed tables of useful reagents vendors and web links
