1. How did getting to know your students' assets and learning needs

- a. support the affirmation and validation of the students' cultural and linguistic backgrounds?

[Getting to know my students was vital in supporting the validation and affirmation of students' cultural and linguistic backgrounds. It was critical for me to understand each student's cultural background and linguistic background to be able to accommodate their learning needs and adjust instruction, seating arrangements, direction, and assessment. Understanding where each student comes from, and the aspects of their home life, academic assets and learning needs helped me in developing a lesson that could reach and relate to all students, regardless of their cultural background and linguistic background. In familiarizing myself with aspects of the student's lives outside of school, I was able to make a judgment on what kinds of situations or topics to include and exclude in my word problems. Students were not singled out in the relatability of the content because I included situations that most people can relate to or have some level of familiarity, like food and sports. These students come from varying socioeconomic statuses and thus have different experiences so I used the information that I gathered in Step 1, "Getting to Know Your Students" to learn about these experiences the students may or may not have had based on their home lives. I did not include things such as vacations or luxuries in my word problem situations as some students may have never been on a vacation or cannot relate to owning things that are expensive or luxurious. In this lesson I made the situations in the word problems relate to food and sports, particularly because I knew that all of my students could imagine and relate to these ideas.]

- b. allow students to access and engage with the content?

[In Step 1, "Getting to Know Your Students" I included information about the level of the class, generally as well as specific levels and scores for the focus students. This informed my lesson as to what accommodations I needed to make in my lesson plan. I was able to review data on not only their state assessment scores, but previous tests and worksheets to see where the class was as a whole in their math unit. These students were working on a previous lesson about word problems and this lesson built upon that. For my focus students as well as other students whose learning needs required, I adjusted seating arrangements and sat them in the front of the class to allow access to engage in the content without being easily distracted by peers. Being at the front of the class allowed for the student to be clearly visible and less likely to be distracted. In introducing the lesson, I made sure to emphasize out new vocabulary, not introducing too many words all once. In completing the OTKR of my students, I learned of some of my students' assets, and found that I have a lot of students who are not shy and are very vocal and personable, and thrived in the conversational aspect of this math lesson. **tPA for Stroke** Justin A. Zivin M.D., Ph.D., John Galbraith Simmons, 2010-12-01 Without warning stroke can paralyze blind or kill Some victims recover but many do not and may even suffer another disabling or fatal attack The drug known as tPA can drastically reduce the long term disability associated with stroke but despite its near miraculous capabilities and the growing support of most neurologists it has been slow to win acceptance as the standard of care in emergency departments nationwide tPA for Stroke chronicles how this remarkable drug came to be tested in stroke victims its early years in development by the pharmaceutical giant Genentech and its eventual marginalization due to a convergence of unfavorable political fiscal and medical circumstances For instance initially many stroke specialists were unconvinced that the drug s benefits outweigh its risks tPA was originally developed and is still used for cardiac patients Moreover neurologists called upon to assess stroke patients have not typically been trained to make decisions in emergency settings and tPA must be given within a scant few hours after stroke These and other factors have continued to delay the drug s universal acceptance as the most effective treatment available and to hamper the general public s awareness that such a treatment exists a troubling state of affairs that Zivin and Simmons argue must be rectified Instilling the knowledge that anyone at any time is susceptible to stroke from the old and infirm to the young and healthy tPA for Stroke is a clarion call to awareness in a rapidly changing healthcare environment in which stroke long a disease in thrall to resignation and pessimism must be neglected no longer
