OCR AS/A Level Year 1 Biology A Student Guide: Module 3 and 4 Richard Fosbery,2016-05-02
Exam Board OCR Level AS A level Subject Biology First Teaching September 2015 First Exam Summer 2016 Reinforce students understanding throughout their course with clear topic summaries and sample questions and answers to help your students target higher grades Written by experienced examiner Richard Fosbery our Student Guides are divided into two key sections content guidance and sample questions and answers Content guidance will Develop students understanding of key concepts and terminology this guide covers modules 3 and 4 exchange and transport biodiversity evolution and disease Consolidate students knowledge with knowledge check questions at the end of each topic and answers in the back of the book Sample questions and answers will Build students understanding of the different question types so they can approach questions from modules 3 and 4 with confidence Enable students to target top grades with sample answers and commentary explaining exactly why marks have been awarded Forensic DNA Trace Evidence Interpretation Duncan Taylor,Bas Kokshoorn,2023-05-30 Forensic DNA Trace Evidence Interpretation Activity Level Propositions and Likelihood Ratios provides all foundational information required for a reader to understand the practice of evaluating forensic biology evidence given activity level propositions and to implement the practice into active casework within a forensic institution The book begins by explaining basic concepts and foundational theory pulling together research and studies that have accumulated in forensic journal literature over the last 20 years The book explains the laws of probability showing how they can be used to derive from first principles the likelihood ratio used throughout the book to express the strength of evidence for any evaluation Concepts such as the hierarchy of propositions the difference between experts working in an investigative or evaluative mode and the practice of case assessment and interpretation are explained to provide the reader with a broad grounding in the topics that are important to understanding evaluation of evidence Activity level evaluations are discussed in relation to biological material transferred from one object to another the ability for biological material to persist on an item

for a period of time or through an event the ability to recover the biological material from the object when sampled for forensic testing and the expectations of the prevalence of biological material on objects in our environment These concepts of transfer persistence prevalence and recovery are discussed in detail in addition to the factors that affect each of them The authors go on to explain the evaluation process how to structure case information and formulate propositions This includes how a likelihood ratio formula can be derived to evaluate the forensic findings introducing Bayesian networks and explaining what they represent and how they can be used in evaluations and showing how evaluation can be tested for robustness Using these tools the authors also demonstrate the ways that the methods used in activity level evaluations are applied to questions about body fluids There are also chapters dedicated to reporting of results and implementation of activity level evaluation in a working forensic laboratory Throughout the book four cases are used as examples to demonstrate how to relate the theory to practice and detail how laboratories can integrate and implement activity level evaluation into their active casework

Performance Analysis of Parallel Applications for HPC Jidong Zhai,Yuyang Jin,Wenguang Chen,Weimin Zheng,2023-09-09 This book presents a hybrid static dynamic approach for efficient performance analysis of parallel applications on HPC systems Performance analysis is essential to finding performance bottlenecks and understanding the performance behaviors of parallel applications on HPC systems However current performance analysis techniques usually incur significant overhead Our book introduces a series of approaches for lightweight performance analysis We combine static and dynamic analysis to reduce the overhead of performance analysis Based on this hybrid static dynamic approach we then propose several innovative techniques for various performance analysis scenarios including communication analysis memory analysis noise analysis computation analysis and scalability analysis Through these specific performance analysis techniques we convey to readers the idea of using static analysis to support dynamic analysis To gain the most from the book readers should have a basic grasp of parallel computing computer architecture and compilation techniques Current Controversies in Philosophy of Memory André Sant'Anna,Christopher Jude McCarroll,Kourken Michaelian,2022-07-29 The surge of philosophical interest in episodic memory has brought to light a number of controversial questions about this form of memory that have only recently begun to be addressed in detail This book organises discussion around six such questions offering two new chapters per question from experts in the field The questions are I What is the relationship between memory and imagination II Do memory traces have content III What is the nature of mnemonic confabulation IV What is the function of episodic memory V Do non human animals have episodic memory VI Does episodic memory give us knowledge of

the past The book constitutes a valuable resource for researchers teachers and students alike For researchers it provides an up to date discussion of some of the main theories arguments and problems in the area For teachers the book can supply the readings for an entire course or particular sections can provide the readings for specific units within a broader philosophy of memory course For students the book offers accessible discussions of some of the most recent topics in the philosophy of memory which when taken together serve as a well rounded introduction to the area

Bosonic Strings: A Mathematical Treatment Jürgen Jost, 2001 This book presents a mathematical treatment of Bosonic string theory from the point of view of global geometry As motivation Jost presents the theory of point particles and Feynman path integrals He provides detailed background material including the geometry of Teichmüller space the conformal and complex geometry of Riemann surfaces and the subtleties of boundary regularity questions The high point is the description of the partition function for Bosonic strings as a finite dimensional integral over a moduli space of Riemann surfaces Jost concludes with some topics related to open and closed strings and D branes Bosonic Strings is suitable for graduate students and researchers interested in the mathematics underlying string theory
