Cheng, 2021-07-01 Mechanical Thrombectomy and Development of Thrombectomy Devices Ichiro Yuki, Juyu

Chueh, 2024-01-24 Today, mechanical thrombectomy plays an essential role in treating stroke related to major vessel occlusion. The device technology has been evolving in the past decade from the first generation device of clot retriever, Merci Clot Retrieval System, to stent retrievers and aspiration catheters. With the quality of aspiration catheters improving every year, the treatment strategy has been changing dramatically. Therefore, to improve the efficacy and safety of the new generation devices, preclinical evaluation of the prototype devices using experimental models under imaging guidance becomes crucial. Various experimental models have been proposed by investigators for the simulation of mechanical thrombectomy. For instance, patient-specific silicon models based on the 3D reconstruction of vessel segments, clinically representative artificial clot models with various compositional and mechanical features (e.g., fibrin-rich clot, erythrocyte-rich clot, or mixture of each) and animal models using swine, ovine, and canine. *Cereal Grains* Sergio O.

Organized so that readers progressively learn and apply the theoretical knowledge described in the parent book, the manual covers a range of essential topics, including main quality control measurements used to determine physical, morphological, chemical, nutritional, and sensory properties of cereal grains and their products; critical factors affecting grain stability throughout storage; and analytical techniques related to insects and pests responsible for grain storage losses. Physical and chemical tests to determine the quality of refined products; laboratory wet-milling procedures; the most common laboratory methods to assess nixtamal masa and tortilla quality and shelf life; yeast and chemical leavening agents important for bakery and other fermented products; laboratory and pilot plant procedures for the production of different types of yeast and chemically leavened bread, crackers, pasta products, breakfast cereals, and snack foods; protocols to bioenzymatically transform starch into modified starches, syrups, and sweeteners; laboratory processes for the production of regular and light beers, distilled spirits, and fuel ethanol. By working through the contents of the book, readers acquire hands-on experience in many quality

control procedures and experimental product development protocols of cereal based products From these foundations they are certain to develop enhanced research skills for product development process design and ingredient functionality **250**
