## Nickel Metal Hydride (NiMH) Batteries

Observe the following guidelines when using Nikon EN-ELH1 and EN-ELH2 NiMH batteries.

- Observe rechargeable battery safety charges. At all times, avoid shorting charges or the EN-ELH1 or EN-ELH2 battery charger battery lead set.

**Batteries may become hot when charged.** Observe this caution when handling batteries during or after charging.

Under certain charging conditions, heat buildup may occur. This is normal and does not indicate a problem. This is more likely to occur with older batteries.

- New batteries and batteries that have been left unused for an extended period tend to lose their charge rapidly. This is normal for NiMH batteries and the batteries will reach a charge after being used and recharged several times.

Batteries will become even warmer to touch when fully charged.

- The battery and charger terminals are covered thoroughly with a protective film. Before charging, remove the film, and after use, return the cover to its original position.
- They are charged at an ambient temperature of 10–30°C (50–86°F).
- They are not recharged until fully recharged (just until the orange lead light comes ON) to help protect the unit and maximize battery life.
