

5 Here are seven numbered cards.

2	2	4	4	4	5	6
---	---	---	---	---	---	---

Zara takes a card at random.
She does not replace the card.

Zara then takes another card at random.

(a) Calculate the probability that both cards have the same number on them.

Probability of getting 2 first time = $\frac{2}{7}$
Probability of getting 2 second time (without replacing) = $\frac{1}{7-1} = \frac{1}{6}$

Probability of getting 2 both times = $\frac{2}{7} \times \frac{1}{6} = \frac{2}{42}$

Similarly, Probability of getting 4 both times = $\frac{3}{7} \times \frac{2}{6} = \frac{6}{42}$

Probability of getting same number

on both the cards = $\frac{2}{42} + \frac{6}{42} = \frac{8}{42} = \underline{\underline{\frac{4}{21}}}$

$\frac{4}{21}$

(2)

(b) Calculate the probability that the number on the second card Zara takes is greater than the number on the first card she takes.

First Card	Second Card	Probability
2	4	$\frac{2}{7} \times \frac{3}{6} = \frac{6}{42}$
2	5	$\frac{2}{7} \times \frac{1}{6} = \frac{2}{42}$
2	6	$\frac{2}{7} \times \frac{1}{6} = \frac{2}{42}$
4	5	$\frac{3}{7} \times \frac{1}{6} = \frac{3}{42}$
5	6	$\frac{1}{7} \times \frac{1}{6} = \frac{1}{42}$
4	6	$\frac{3}{7} \times \frac{1}{6} = \frac{3}{42}$

$\frac{17}{42}$

(3)

Probability = $\frac{6}{42} + \frac{2}{42} + \frac{2}{42} + \frac{3}{42} + \frac{1}{42} + \frac{3}{42} = \underline{\underline{\frac{17}{42}}}$

Manufacturing and Engineering Technology (ICMET 2014) Ai Sheng, Yizhong Wang, 2014-11-24 Manufacturing and Engineering Technology brings together around 200 peer reviewed papers presented at the 2014 International Conference on Manufacturing and Engineering Technology held in San ya China October 17 19 2014 The main objective of these proceedings is to take the Manufacturing and Engineering Technology discussion a step further Con Putting the "Why" Back into Bone "Archytecture" Phil Salmon, Daniel Chappard, Andrew Anthony Pitsillides, 2017-07-27 A large literature exists on trabecular and cortical bone morphology The engineering performance of bone implied from its 3d architecture is often the endpoint of bone biology experiments being clinically relevant to bone fracture How and why does bone travel along its complex spatio temporal trajectory to acquire its architecture The question why can have two meanings The first teleological why is an architecture advantageous is the domain of substantial biomechanical research to date The second etiological how did an architecture come about has received far less attention This Frontiers Bone Research Topic invited contributions addressing this etiological why what mechanisms can coordinate the activity of bone forming and resorbing cells to produce the observed complex and efficient bone architectures One mechanism is proposed chaotic nonlinear pattern formation NPF which underlies in a unifying way natural structures as disparate as trabecular bone swarms of birds flying or shoaling fish island formation fluid turbulence and others At the heart of NPF is the fact that simple rules operating between interacting elements multiplied and repeated many times lead to complex and structured patterns This paradigm of growth and form leads to a profound link between bone regulation and its architecture in bone the architecture is the regulation The former is the emergent consequence of the latter Whatever mechanism does determine bone s developing architecture has to operate at the level of individual sites of formation and resorption and coupling between the two This has implications as to how we understand the effect on bone of agents such as gene products or drugs It may be for instance that the tuning of coupling between formation and resorption might be as important as the achievement of enhanced bone volume The ten articles that were contributed to this Topic were just what we hoped for a snapshot of leading edge bone biology research which addresses the question of how bone gets its shape We hope that you find these papers thought provoking and that they might stimulate new ideas in the research into bone architecture growth and adaptation and how to preserve healthy bone from gestation and childhood until old age *Automotive, Mechanical and Electrical Engineering* Lin Liu, 2017-06-26 The 2016 International Conference on Automotive Engineering Mechanical and Electrical Engineering AEMEE 2016 was held December 9 11 2016 in Hong Kong China AEMEE 2016 was a platform for presenting excellent results and new challenges facing the fields of automotive mechanical and electrical engineering Automotive Mechanical and Electrical Engineering brings together a wide range of contributions from industry and governmental experts and academics experienced in engineering design and research Papers have been categorized under the following headings Automotive Engineering and

Future of Education Pixel,2015-07-01 **Reservoir Model Design** Philip Ringrose,Mark Bentley,2021-06-09 This book gives practical advice and ready to use tips on the design and construction of subsurface reservoir models The design elements cover rock architecture petrophysical property modelling multi scale data integration upscaling and uncertainty analysis Philip Ringrose and Mark Bentley share their experience gained from over a hundred reservoir modelling studies in 25 countries covering clastic carbonate and fractured reservoir types and for a range of fluid systems oil gas and CO₂ production and injection and effects of different mobility ratios The intimate relationship between geology and fluid flow is explored throughout showing how the impact of fluid type displacement mechanism and the subtleties of single and multi phase flow combine to influence reservoir model design The second edition updates the existing sections and adds sections on the following topics A new chapter on modelling for CO₂ storage A new chapter on modelling workflows An extended

chapter on fractured reservoir modelling An extended chapter on multi scale modelling An extended chapter on the quantification of uncertainty A revised section on the future of modelling based on recently published papers by the authors The main audience for this book is the community of applied geoscientists and engineers involved in understanding fluid flow in the subsurface whether for the extraction of oil or gas or the injection of CO₂ or the subsurface storage of energy in general We will always need to understand how fluids move in the subsurface and we will always require skills to model these quantitatively The second edition of this reference book therefore aims to highlight the modelling skills developed for the current energy industry which will also be required for the energy transition of the future The book is aimed at technical professional practitioners in the energy industry and is also suitable for a range of Master s level courses in reservoir characterisation modelling and engineering Provides practical advice and guidelines for users of 3D reservoir modelling packages Gives advice on reservoir model design for the growing world wide activity in subsurface reservoir modelling Covers rock modelling property modelling upscaling fluid flow and uncertainty handling Encompasses clastic carbonate and fractured reservoirs Applies to multi fluid cases and applications hydrocarbons and CO₂ production and storage rewritten for use in the Energy Transition Data Science Jing He, Philip S. Learning a non-native language in a naturalistic environment: Insights from behavioural and neuroimaging research Christos Pliatsikas, Vicky Chondrogianni, 2015-09-02 It is largely accepted in the relevant literature that successful learning of one or more non native languages is affected by a number of factors that are independent of the target language s per se these factors include the age of acquisition AoA of the target language s the type and amount of formal instruction the learners have received as well as the amount of language use that the learners demonstrate Recent experimental evidence suggests that one crucial factor for efficient native like performance in the non native language is the amount of naturalistic exposure or immersion that the learners receive to that language This can be broadly defined as the degree to which language learners use their non native language outside the classroom and for their day to day activities and usually presupposes that the learners live in an environment where their non native language is exclusively or mostly used Existing literature has suggested that linguistic immersion can be beneficial for lexical and semantic acquisition in a non native language as well as for non native morphological and syntactic processing More recent evidence has also suggested that naturalistic learning of a non native language can also have an impact on the patterns of brain activity underlying language processing as well as on the structure of brain regions that are involved expressed as changes in the grey matter structure

This Research Topic brings together studies on the effects of learning and speaking a non native language in a naturalistic environment These include more efficient or native like processing in behavioural tasks tapping on language lexicon morphology syntax as well as changes in the brain structure and function as revealed by neuroimaging studies **The built environment and public health: New insights** Linchuan Yang,Ruoyu Wang,Bao-Jie He,Yu Ye,Yibin Ao,2023-02-06

Readings in Computer Vision Martin A. Fischler,Oscar Firschein,2014-06-28 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing

relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume
