Milburn, 2012-12-06 When WILHELM RUHLAND developed his plan for an Encyclopedia of Plant Physiology more than three decades ago biology could still be conveniently subdivided into classical areas Even within plant physiology subdivisions were not too difficult to make and general principles could be covered sufficiently in the two introductory volumes of the Encyclopedia on the physical and chemical basis of cell biology But the situation changed rapidly even during the 12 year publication period of the Encyclopedia 1955 1967 The new molecular direction of genetics and structural research on biopolymers had an integrating effect on all other biological fields including plant physiology and it became increasingly difficult to keep previously distinct areas separated RUHLAND S overall plan included 18 volumes and about 22 000 pages It covered the entire field of plant physiology in most cases from the very beginning But as each volume appeared it was clear that its content would soon be outdated *Plant Physiology 8* F.C. Steward, 2012-12-02 Plant Physiology A Treatise Volume VIII Nitrogen Metabolism focuses on the physiological aspects of nitrogen metabolism in plants This book considers the descriptive biochemistry by which nitrogen compounds and their reactions are recognized the way the feasible reactions are assembled into metabolic pathways and cycles that give meaningful purpose and direction to the course of metabolism and the ongoing fate of nitrogen

compounds in relation to ontogeny growth and development This volume is organized into four chapters and begins with an introduction to developments in basic and applied biological nitrogen fixation focusing on the agriculturally important mechanisms by which atmospheric nitrogen is converted to plant protein The biology and biochemistry of nitrogen fixing associations and their practical application in agriculture are discussed along with nitrogen metabolism in the context of various actual situations in which cells divide and grow and specific plants develop mature and reproduce The next chapter deals with the metabolism and turnover of proteins citing specific proteins the enzymes ribulosebiphosphate carboxylase and nitrate reductase and seed protein as the type cases to illustrate the fate of special proteins through their formation and turnover The mechanisms and biological settings of protein degradation as distinct from breakdown during protein turnover are also covered in detail This book is intended for teachers research workers and students with specific interest in plant physiology
