

# Steps For Success

## 1. DIG:

Dig a hole twice as wide as your rootball. Make sure to dig deep enough so the rootball sticks up about 2" above finished grade. For B&B trees & shrubs, remove twine and burlap as much as possible. Cut wire baskets if you can't remove them. Always remove any rope around the trunk.

## 2. MIX:

Mix the native soil you removed from the hole with your bag of **soil conditioner** and **Bio-Tone starter** (follow directions) and set aside.

## 3. PLACE:

Remove tree from the container and gently pull the roots away from the root ball. After centering the tree in the hole, back-fill with your amended soil mixture. **DO NOT** compact the soil. Gently tamp it down to remove any air pockets.

## 4. WATER:

Deep water your new tree or shrub with a hose. **Do NOT** rely on irrigation systems or sprinklers. They are designed to reach the top 2" of soil. Water thoroughly until the soil is saturated. The water needs to reach the roots (12" to 18" down) Water at least 2-3 times a week for the first year, especially during periods of heat and drought.

## 5. MULCH:

Don't skip this step. Mulch regulates temperatures, maintains moisture in the soil and prevents weeds. Apply at least 3 inches of mulch around the base. Do not extend mulch up to the trunk - leave several inches of clear space between the tree trunk and where the mulch starts.

## FINAL STEP:

Take a selfie with your tree and send it to your friends!
