Information: Only four planets in our solar system are made of rock, Mercury, Venus, Earth, and Mars. Temperatures on Mercury and Venus are over 800-degrees Fahrenheit, while Mars sits around negative 100-degrees Fahrenheit. Mercury and Mars have no suitable atmosphere to breathe, while Venus holds an atmosphere so thick in carbon dioxide it would kill humans. The other 4 planets, Jupiter, Saturn, Uranus, and Neptune, are made of gas and cannot support land dwelling.

Question: A human needs a habitable planet besides Earth for survival which planet would the most suitable for humans to live in space? and WHY. (1 POINT) answer the question in a structured way. Information/Reasons/your conclusion. If INFORMATION is appropriate then conclusion, including why the other planets were not chosen.

- *There is none to be the most suitable backup planet for humans if we had to leave Earth.*
- *There is made of rock like Earth, so we could build. There is cold, but humans survive in a wider temperature on Earth of -50-degrees Fahrenheit. There has no atmosphere, but humans can wear oxygen masks to breathe easily.*
- *Mercury and Venus are too hot and would kill humans, so we cannot use them for backup. The gas planets have no surface so we cannot use them for backup. There is the only available option for a backup planet.*
