Nikon

Nickel Metal Hydride (NiMH) Batteries

Observe the following guidelines when using Nikon EN-ELH1 and EN-ELH2 NiMH batteries.

- Observe rechargeable battery safety charges. At all times, avoid shorting charges or the EN-ELH1 or EN-ELH2 battery charger battery lead pair.

⚠ Battery may become hot when charged. Observe this warning after handling batteries during or after charging. Batteries may become hot due to heating and to other performance-related factors after charging under some conditions. This is normal and does not indicate a problem.

- New batteries and batteries that have been left unused for an extended period tend to lose their charge rapidly; this is normal for NiMH batteries and the batteries will initiate a charge after being used and recharged successfully.

- Batteries will become hot when exposed to high ambient temperatures.
- The battery and charger terminals are covered thoroughly with a protective film before charging to remove fingerprints and other contaminants. Do not physically remove battery lead terminals.
- They are charged at an ambient temperature of 10–30°C (50–86°F).
- They are fully recharged until fully extended (just until the orange lead pair shows 0000) and charged to the correct number before recharging.
