Learning to see (better): improving visual deficits with perceptual learning Gianluca Campana, Marcello Maniglia, 2015-07-09 Perceptual learning can be defined as a long lasting improvement in a perceptual skill following a systematic training due to changes in brain plasticity at the level of sensory or perceptual areas Its efficacy has been reported for a number of visual tasks such as detection or discrimination of visual gratings De Valois 1977 Fiorentini Mayer 1983 motion direction discrimination Ball Ball Sekuler Shiu Vogels Bennett Fahle 1997 Fahle Kumar McKee Saarinen Casco Campana Campana Ellison Sireteanu Karni 1993 Saarinen Pourtois et al 2008 and extrastriate Ahissar Levi 2005 Levi Zhou et al 2006 myopia Tan Polat et al 2004 Polat 2009 Tan Fong 2008 More recently Maniglia et al 2011 perceptual learning with the lateral interactions paradigm has been successfully used for improving peripheral vision in normal people by improving contrast sensitivity and reducing crowding the interference in target discrimination due to the presence of close elements offering fascinating new perspectives in the rehabilitation of people who suffer of central vision loss such as maculopathy patients partially overcoming the structural differences between fovea and periphery that limit the vision outside the fovea One of the strongest point and a distinguishing feature of perceptual learning is that it does not just improve the subject s performance but produces changes in brain s connectivity and efficiency resulting in long lasting enduring neural changes By tailoring the paradigms on each subject s needs perceptual learning could become the treatment of choice for the rehabilitation of visual functions emerging as a simple procedure that doesn t need expensive equipment **New Frontiers in Teaching and Learning English** Paola Vettorel, 2015-06-18 The contributions to this volume explore several focal issues related to the global spread of English and their implications for English language teaching providing both theoretical and empirical perspectives on recent research and implications in educational terms The volume is divided into three thematic sections namely Developments in ELF research and pedagogic implications Raising teachers awareness of ELF and ELF and ELT practices The book provides up to date perspectives on the issues implications and repercussions that findings in ELF research can have for ELT practices The contributors are all scholars and researchers who have long been engaged in ELF related research and who have undertaken operational and practical work in the field and as such offer novel perspectives on the effects of EFL research on the teaching and learning of English The volume also presents the findings of innovative projects in teacher education involving pre and in service teachers providing exemplificative good practices of possible new routes into pluralistic ELF aware and ELF oriented didactic perspectives **ICPMG2014 - Physical Modelling in Geotechnics** Christophe Gaudin, David White, 2019-01-08 The 8th International Conference on Physical Modelling in Geotechnics ICPMG2014 was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering This quadrennial conference is the traditional focal point for the

human primates can lead to important advancements in computational perception theories and systems One of the main difficulties that arises when designing automatic vision systems is developing a mechanism that can recognize or simply find an object when faced with all the possible variations that may occur in a natural scene with the ease of the primate visual system The area of the brain in primates that is dedicated at analyzing visual information is the visual cortex The visual cortex performs a wide variety of complex tasks by means of simple operations These seemingly simple operations are applied to several layers of neurons organized into a hierarchy the layers representing increasingly complex abstract intermediate processing stages In this Research Topic we propose to bring together current efforts in neurophysiology and computer vision in order 1 To understand how the visual cortex encodes an object from a starting point where neurons respond to lines bars or edges to the representation of an object at the top of the hierarchy that is invariant to illumination size location viewpoint rotation and robust to occlusions and clutter and 2 How the design of automatic vision systems benefit from that knowledge to get closer to human accuracy efficiency and robustness to variations
