Instructions: This lab is found on the last page of your 6.03 lesson. Submit the lab using the instructions on the bottom of this lab report.

### TITLE: Plant Structure and Function Lab

#### OBJECTIVES:

After doing this lab, you should be able to:

- Identify the correct plant tissues from the corresponding slides.
- Identify the different structures of a flower.
- Describe the functions of each flower structure.
- Describe the functions of each plant tissue.
- Answer the Analysis and Conclusion questions using multiple sentences.

#### MATERIALS:

- Flower
- Scissors
- Tape
- Tweezers
- Lab Report

### PROCEDURE:

#### Part 1: Plant Tissue Identification

Review each image in your lab activity slide show on the last pg of the 6.03 lesson. Use the **word bank** below to identify the correct tissue or organ based on each individual slide, and type your answers into the chart. Some words from your bank may be used multiple times.

**Plants - Structure and Function** Open University. Comparative Physiology Course Team, 1971 *Transport Phenomena in Plants* D. A. Baker, 2012-12-06 Plants in addition to their role as primary synthesizers of organic compounds have evolved as selective accumulators of inorganic nutrients from the earth's crust This ability to mine the physical environment is restricted to green plants and some microorganisms other life forms being directly or indirectly dependent on this process for their supply of mineral nutrients The initial accumulation of ions by plants is often spatially separated from the photosynthetic parts necessitating the transport to these parts of the inorganic solutes thus acquired The requirement for energy rich materials by the accumulation process is provided by a transport in the opposite direction of organic solutes from the photosynthetic areas These transport phenomena in plants have been studied at the cellular level the tissue level and the whole plant level The basic problems of analysing the driving forces and the supply of energy for solute transport remain the same for all systems but the method of approach and the type of results obtained vary widely with the experimental material employed reflecting the variation of the solute transporting properties which have selectively evolved in response to both internal and external environmental pressures **Study**
