*The Oxford Handbook of Urban Economics and Planning* Nancy Brooks, Kieran Donaghy, Gerrit-Jan Knaap, 2012-01-12 This volume embodies a problem driven and theoretically informed approach to bridging frontier research in urban economics and urban regional planning The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship Although economists were among the early contributors to the literature on urban planning many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions equity over efficiency and normative prescriptions over positive analysis Planners meanwhile even as they draw upon economic principles often view the work of economists as abstract not sensitive to institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the efficient provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap the book highlights the best scholarship in planning and economics that address the most pressing urban problems of our day and stimulates further dialog between scholars in urban planning and urban economics

**Introduction to Urban Science** Luis M. A. Bettencourt, 2021-08-17 A novel integrative approach to cities as complex adaptive systems applicable to issues ranging from innovation to economic prosperity to settlement patterns Human beings around the world increasingly live in urban environments In Introduction to Urban Science Luis Bettencourt takes a novel integrative approach to understanding cities as complex adaptive systems claiming

that they require us to frame the field of urban science in a way that goes beyond existing theory in such traditional disciplines as sociology geography and economics He explores the processes facilitated by and in many cases unleashed for the first time by urban life through the lenses of social heterogeneity complex networks scaling circular causality and information Though the idea that cities are complex adaptive systems has become mainstream until now those who study cities have lacked a comprehensive theoretical framework for understanding cities and urbanization for generating useful and falsifiable predictions and for constructing a solid body of empirical evidence so that the discipline of urban science can continue to develop Bettencourt applies his framework to such issues as innovation and development across scales human reasoning and strategic decision making patterns of settlement and mobility and their influence on socioeconomic life and resource use inequality and inequity biodiversity and the challenges of sustainable development in both high and low income nations It is crucial says Bettencourt to realize that cities are not zero sum games and that knowledge human cooperation and collective action can build a better future

*Urban Life in the Distant Past* Michael E. Smith,2023-03-30 In this book Michael Smith offers a comparative and interdisciplinary examination of ancient settlements and cities Early cities varied considerably in their political and economic organization and dynamics Smith here introduces a coherent approach to urbanism that is transdisciplinary in scope scientific in epistemology and anchored in the urban literature of the social sciences His new insight is energized crowding a concept that captures the consequences of social interactions within the built environment resulting from increases in population size and density within settlements Smith explores the implications of features such as empires states markets households and neighborhoods for urban life and society through case studies from around the world

Direct influences on urban life as mediated by energized crowding are organized into institutional top down forces and generative bottom up processes Smith's volume analyzes their similarities and differences with contemporary cities and highlights the relevance of ancient cities for understanding urbanism and its challenges today Urbanization and Socio-Economic Development in Africa Steve Kayizzi-Mugerwa, Abebe Shimeles, Nadège Désirée Yaméogo, 2014-05-16 The main goal of this book is to put urbanization and its challenges squarely on Africa's development agenda Planned urbanization can improve living conditions for the majority help in the expansion of the middle class and create conditions for economic transformation However many African cities have developed haphazardly resulting in the decline of public services in slum proliferation and increases in poverty African cities thrive on activities characterized by easy entry and low productivity generally referred to as the informal sector Indeed today some urban dwellers are poorer than their cousins in the countryside In spite of reform attempts many governments have not been able to create an enabling environment with adequate infrastructure and institutions to sustain markets for easy exchange and production This study argues that with careful policies and planning the situation can be changed If the recent natural resource led economic boom that we have seen in many African countries is used for structural reforms and urban renewal African cities could become centers of economic opportunity The challenge for African policymakers is to ensure that urban development is orderly and that the process is inclusive and emphasizes the protection of the environment hence green growth Handbook of Regional and Urban Economics V. Henderson, J.F. Thisse, 2004-07-21 The new Handbook of Regional and Urban Economics Cities and Geography reviews synthesizes and extends the key developments in urban and regional economics and their strong connection to other recent developments in modern economics Of particular interest is the development of the new economic geography and its incorporation along with innovations in industrial organization endogenous growth network theory and applied econometrics into urban and regional economics The chapters cover theoretical developments concerning the forces of agglomeration the nature of neighborhoods and human capital externalities the foundations of systems of cities the development of local political institutions regional agglomerations and regional growth Such massive progress in understanding the theory behind urban and regional phenomenon is consistent with on going progress in the field since the late 1960's What is unprecedented are the developments on the empirical side the development of a wide body of knowledge concerning the nature of urban externalities city size distributions urban sprawl urban and regional trade and regional convergence as well as a body of knowledge on specific regions of the world Europe Asia and North America both current and historical The Handbook is a key reference piece for anyone wishing to understand the developments in the field

**Economic Fundamentals of Road Pricing** Timothy Doe-Kwong Hau, 1992 **Entrepreneurship and Dynamics in the Knowledge Economy** Charlie Karlsson, Börje Johansson, Roger Stough, 2006-09-27 The phenomenon of entrepreneurship has attracted researchers from a variety of disciplines and a diverse number of analytical approaches Currently there is a

considerable amount of confusion and a variety of conflicting theories which are being used interchangeably and ambiguously In this important new book the authors argue that there are analytically distinct forms of entrepreneurship each of them having an individual logic of their own They highlight the role of individual economic agents with endowments of new knowledge or new combinations of old knowledge as entrepreneurs and thus identify them as dynamic factors in the knowledge economy Overall this book not only provides a contemporary overview of current research in the field but also summarizes the policy conclusions that can be drawn from current research

Greenhut, George Norman, Chao-Shun Hung, 1987-01-30 This new approach to traditional price theory and to the analysis of imperfect competition represents a breakthrough in the development of a new microeconomic theory Addresses issues in price theory industrial organization international trade and regional urban economics

**Globalization and Regional Economic Modeling** Russel Cooper, Kieran Donaghy, Geoffrey Hewings, 2007-09-23 Globalization is affecting regional economies in a broad spectrum of aspects from labor market conditions and development policies to climate change To understand better how this works we need both conceptual and methodological contributions We need new schemes to organize our thinking direct our attention and frame thought experiments on the basis of which guidance may be offered And we need methodological innovations that enable us to carry out studies and thought experiments at levels of spatial and temporal resolution and formal complexity adequate to capture and account for the phenomena that characterize globalization The chapters of this volume written by an international cast of eminent regional scientists represent contributions of both types in many cases introducing and demonstrating the use of new tools for analyzing and understanding enormous changes underway in regional economies around the world
