Resilience in Ecology and Urban Design S.T.A. Pickett, M.L. Cadenasso, Brian McGrath, 2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today's urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world's population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the

adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto's Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience

Lost Mosaics and Frescoes of Rome of the Mediaeval Period Charles Rufus Morey, 1915

The Central Social and Political Problem of the UAR.: The urban mosaic Alan W. Horton, 1962

Urban and Religious Spaces in Late Antiquity and Early Byzantium Jean-Michel Spieser, 2024-12-11 Professor Spieser deals here with a number of the transformations that took place in the world of Late Antiquity and early Christianity focusing upon notions of space The first set of articles opening with a newly written introductory essay addresses the development of

urban landscapes from the Roman period up to the iconoclast era in Byzantium In particular he looks at the consequences of christianisation and argues that the changing fortunes of the town cannot be attributed to a few causes such as war or natural disaster but resulted from a complex interplay between the economy and ideology religion and politics A second group concerned with the relationship of late antique man with his surroundings and therefore his perception of space sets out to explain how the decoration of churches on apses for example or on doors reflects new senses of how religious spaces should be organised Six of these studies have been translated into English for this volume and it ends with an important section of additional notes and comment

Property Rights, Planning and Markets Christopher J. Webster, Lawrence Wai-chung Lai, 2003-01-01 This is an important book The authors in effect offer a positive theory of planning and urbanisation As such Webster and Lai s model based on institutional economics is a vast improvement on some equally ambitious predecessors The book s insights and clarity make it a must reading for anyone seeking better understanding of how cities evolve as they do and why planning is an integral part of their evolution Ernest Alexander University of Wisconsin Milwaukee US A truly remarkable achievement Mark Pennington University of London UK Chris Webster and Lawrence Lai have created a coherent and insightful integration of concepts such as property rights organizations competition incentives transaction costs public goods and externalities which will help theorists and urban practitioners analyze and manage city goods and services An important insight of the authors is the recognition of the interdependencies of people in a neighborhood which can be efficiently handled with shares in the property value of the neighborhood There is a constant question of how much markets and how much government should be involved in urban matters and the authors provide a reasoned balanced approach which recognizes the vital role of government while appreciating the effectiveness of markets and decentralized decision making including private institutions or clubs such as homeowners associations Their position that governments and markets co evolve and complement one another is sound and their conclusions regarding the need to provide clear property rights and efficient rules provide us with theoretical tools to better understand how cities can be improved while being wary of the allure of utopia Fred Foldvary Santa Clara University California US This is a really important contribution to the planning literature Beautifully written and clearly structured it explains the complex relationship between planning and markets using the economic perspective of transaction cost theory and the new institutionalism This provides a robust way of addressing the old economic and planning agenda which the authors illustrate with references to cases and situations from across the world Informative and stimulating this should be included in every planning theory course and will be helpful to all trying to re think old debates about planning and markets Patsy Healey Newcastle University UK Professors Webster and Lai have written a masterly work that applies the principles of Hayek and of institutional economics to understanding cities This is a refreshing and more convincing alternative to the standard politically correct views Harry W Richardson University of Southern California US Property Rights Planning and Markets covers an original and intriguing issue viz the existence and

development of cities at the interface of market forces and planned or controlled policies the book offers new horizons and contains refreshing reading material Peter Nijkamp Free University Amsterdam The Netherlands This book represents a major innovation in the institutional analysis of cities and their planning management and governance Using concepts of transaction costs and property rights the work shows systematically how urban order evolves as individuals co operate in cities for mutual gain Five kinds of urban order are examined arising as co operating individuals seek to reduce the costs of transacting with each other These are organisational order combinations of property rights institutional order rules and sanctions proprietary order fragmentation of property rights spatial order and public domain order Property Rights Planning and Markets also offers an institutional interpretation of urban planning and management that challenges both the view that planning inevitably conflicts with freedom of contract and the view that its function is a means of correcting market failures Real life examples from countries and regions around the world are used to illustrate the universal relevance of theoretical generalisations which will be welcomed by a new generation of policymakers and students who take on a world view that goes beyond national boundaries
