

Changing Engine Oil And Filters

General

The engine oil and filters should be changed every 250 hours (or 6 months). Use engine oils which meet API classification CD or CC/CD. See the Specification section of this manual for recommended oil viscosity.

The 250 hour oil and filter change interval can be considered under normal conditions and type CC/CD or CD oils are used. Type CC/CD or CD oils are required to meet Engine Service Classification CD or MIL-L2104C specifications.

IMPORTANT: The above recommended oil change interval applies when the fuel sulphur is 0.4% or less. When the sulphur content is 0.4% to 1.0% then reduce the change interval one-half (1/2). When the sulphur content is above 1.0% then reduce the interval to one-fourth (1/4) the normal interval.

Drain the engine oil when the engine is warm. This will help flush most of the contaminants from the engine sump. Use a suitable container which will hold total engine oil capacity.

CAUTION: Use caution when draining oil or changing filters. Hot oil or components can cause burns if they contact skin.

IMPORTANT: Spin-On Filter Information

Always inspect or shake out all new spin-on type filters prior to installation to be sure that there are no machining filings or debris in the filter.

1. Bring engine to operating temperature, shut down engine, remove drain plug from bottom of oil pan, and drain oil.
2. Install drain plug in oil pan. Torque to 60 to 70 ft lbs (81 to 95 N.m).
3. Use a filter wrench to unscrew the spin-on, by-pass and engine oil filter elements.

NOTE: At each filter change check torque of filter adapter mounting capscrew; it should be 25 to 35 ft lbs (34 to 47 N.m). If the capscrew is not within torque range, the adapter may rotate when the spin-on filter is removed.

IMPORTANT: Replace the adapter to the filter head gaskets each 1000 service hours, or annually.

4. Change engine and by-pass spin-on oil filter elements.
