The graph below shows how pH affects the enzyme activity of four different enzymes: A, B, C, and D.

6. What will most likely happen to the action of an enzyme from the small intestine if it is placed in an environment similar to the environment in which enzyme C functions best?
 - a. It would no longer be able to function because the environment is too acidic.
 - b. It would adapt to the new environment and start carrying out the same function as enzyme C.
 - c. It would continue to function because it is able to modify the pH of the environment.
 - d. It would be able to function because the pH of the environment is similar to that of the intestine.
