The Shale Dilemma Shanti Gamper-Rabindran,2017-11-30 The US shale boom and efforts by other countries to exploit their shale resources could reshape energy and environmental landscapes across the world But how might those landscapes change Will countries with significant physical reserves try to exploit them Will they protect or harm local communities and the global climate Will the benefits be shared or retained by powerful interests And how will these decisions be made The Shale Dilemma brings together experts working at the forefront of shale gas issues on four continents to explain how countries reach their decisions on shale development Using a common analytical framework the authors identify both local factors and transnational patterns in the decision making process Eight case studies reveal the trade offs each country makes as it decides whether to pursue delay or block development Those outcomes in turn reflect the nature of a country s political process and the power of interest groups on both sides of the issue The contributors also ask whether the economic arguments made by the shale industry and its government supporters have overshadowed the concerns of local communities for information on the effects of shale operations and for tax policies and regulations to ensure broad based economic

development and environmental protection As an informative and even handed account The Shale Dilemma recommends practical steps to help countries reach better more transparent and more far sighted decisions The Soils of the Philippines Rodelio B. Carating, Raymundo G. Galanta, Clarita D. Bacatio, 2014-04-23 The first soil survey in the Philippines was done by Mr Clarence Dorsey an American soil scientist in the province of Batangas in 1903 The Soils of the Philippines however is the first comprehensive summary of more than a century of soil survey work in this country It integrates the soil concepts of the reconnaissance soil survey results which commenced as early as 1934 and continued until the mid 1960s with the semi detailed soil surveys that continue to this day The result is the first ever genetic key for classifying Philippine soils at soil series level thus making it possible for any newcomers to the soil survey field to confidently produce their own soil map at a more detailed map scale to suit the project requirements This book brings together discussions on soils and soil mapping units and up to date international techniques and technologies It makes soils relevant to current political realities and national issues As soil survey moves from a reductionist agricultural development planning tool to a more holistic and integrated approach to enable us to understand our dynamic and complex environment The Soils of the Philippines will be the only source of authoritative and updated data on soil resources for macro level resource management planning for decades to come With a vanishing breed of experienced soil surveyors not only in the Philippines but also worldwide it may remain the only book on Philippine soils for the next hundred years or more Since soils follow a geological and not a human time frame the contents of this volume will stay relevant for soil surveyors even in a fast changing world As the country leaps from an agricultural economy towards modernization and a more diversified economic base some of the soil series in the Philippines for example the Guadalupe series underlying the skyscrapers of Makati City are becoming extinct as a result of urban development Therefore this book serves as the repository for the soils that we possess the soils that have been lost through decades of urbanization while at the same time it creates a soil classification system for the soils we are yet to discover

Neoliberalizing Spaces in the Philippines Arnisson Andre Ortega, 2016-09-09 Amidst the recent global financial crisis and housing busts in various countries the Philippines booming housing industry has been heralded as Southeast Asia s hottest real estate hub and the saving grace of a supposedly resilient Philippine economy This growth has been fueled by demand from balikbayan returnee Overseas Filipinos and has facilitated the rise of gated suburban communities in Manila s sprawling peri urban fringe But as the Filipino dreams of successful balikbayans are built inside these new gated residential developments the lives of marginalized populations living in these spaces have been upended and thrown into turmoil as they face threats of expulsion Based on almost four years of research this book examines the tumultuous geographies of neoliberalization that link suburbanization transnational mobilities and accumulation by dispossession Through an accounting of real estate and new suburban landscapes it tells of a Filipino transnationalism that engenders a market based and privatized suburban political economy that reworks socio spatial relations and class dynamics

In presenting the literal and discursive transformations of spaces in Manila's peri urban fringe the book details life inside new gated suburban communities and discusses the everyday geographies of privileged new property owners mainly comprised of balikbayan families and exposes the contradictions of gated suburban life from resistance to Home Owner Association rules to alienating feelings of loss. It also reveals the darker side of the property boom by mapping the volatile spaces of the Philippines surplus populations comprised of the landless farmers informal settler residents and indigenous peoples. To make way for gated communities and other profitable developments in the peri urban region marginalized residents are systematically dispossessed and displaced while concomitantly offered relocation to isolated socialized housing projects the last frontier for real estate accumulation. These compelling accounts illustrate how the territorial embeddedness of neoliberalization in the Philippines entails the consolidation of capital by political economic elites and privatization of residential space for an idealized transnational property clientele. More than ever as the Philippines is being reshaped by diaspora and accumulation by dispossession the contemporary moment is a critical time to reflect on what it truly means to be a nation.

Routledge Handbook of National and Regional Ocean Policies Biliana Cicin-Sain, David

Vanderzwaag, Miriam C. Balgos, 2015-05-15 This comprehensive handbook prepared by leading ocean policy academics and practitioners from around the world presents in depth analyses of the experiences of fifteen developed and developing nations and four key regions of the world that have taken concrete steps toward cross cutting and integrated national and regional ocean policy. All chapters follow a common framework for policy analysis. While most coastal nations of the world already have a variety of sectoral policies in place to manage different uses of the ocean such as shipping fishing oil and gas development in the last two decades the coastal nations covered in the book have undertaken concerted efforts to articulate and implement an integrated ecosystem based vision for the governance of ocean areas under their jurisdiction. This includes goals and procedures to harmonize existing uses and laws to foster sustainable development of ocean areas to protect biodiversity and vulnerable resources and ecosystems and to coordinate the actions of the many government agencies that are typically involved in oceans affairs. The book highlights the serious conflicts of use in most national ocean zones and the varying attempts by nations to follow the prescriptions emanating from the 1982 UN Law of the Sea Convention and the outcomes of the 1992 2002 and 2012 sustainable development summits. The interrelationship among uses and processes in the coast and ocean requires that ocean governance be integrated precautionary and anticipatory. Overall the book provides a definitive state of the art review and analysis of national and regional ocean policies around the world.
