What Is A Control Recipe:

WPF Recipes in C# 2008 Sam Bourton, Allen Jones, Sam Noble, 2008-10-23 Windows Professional Foundation WPF offers amazing opportunities to NET programmers in terms of the user interfaces they can deliver to their customers. But this significant technological advance comes with a steep learning curve requiring the programmer to learn new classes, new syntax, and an entirely new approach to user interface development. Although WPF has been generally available since 2008, commercial take up has been relatively slow, and the publicly available body of knowledge has been weak in terms of real world examples and best practice information. Using *WPF Recipes in C# 2008*, you will find a simple and straightforward approach to solving the problems you face every day. Each solution contains a complete working example that demonstrates how to make the best use of WPF. You can use the example as a template to solve your own problem or as a base on which to build a solution tailored to your specific needs. Packed with well structured and documented solutions to a broad range of common WPF problems, this book will be a valuable addition to any C programmer's reference library. Examples included provide you with a rich source of information as you begin to learn and will be an invaluable quick reference guide once you are a proficient WPF programmer. The emphasis on solving the day to day WPF problems that all programmers face frees you from needing to trawl through weighty programming tomes or sift through API documentation, allowing you to focus on the more interesting and innovative aspects of your project.

Modeling and Analysis for Optimal Scheduling of Biodiesel Batch-Plants Mohamad Fauzan Amir, 2011 Generally scheduling problems accompanying typical batch processes are vitally important to be solved for improving the plant productivity. In these respects finding a good and feasible schedule or even an optimal result by which costs and lead times can be reduced is often a very complex and also a difficult task. Moreover in large plants the challenges come not only from the modeling ways that require systematic and structured approaches but also from the exact strategies how the performance of the model can be analyzed. The goal of this research is to develop a comprehensive study on industrial sized plants with regard modeling and analysis of scheduling problems. Formalization of the required plant specifications, the modularly modeling ways which refer to the widely used batch standards and also the strategies for tackling complexity are the main contributions of this thesis. These studies will be carried out by using the Timed Net Condition Event Systems (TNCEs) model. Finally the model is analyzed to synthesize an optimal control strategy for the investigated plants.
