

MICRO-HYDRO INSTALLATION SIZING

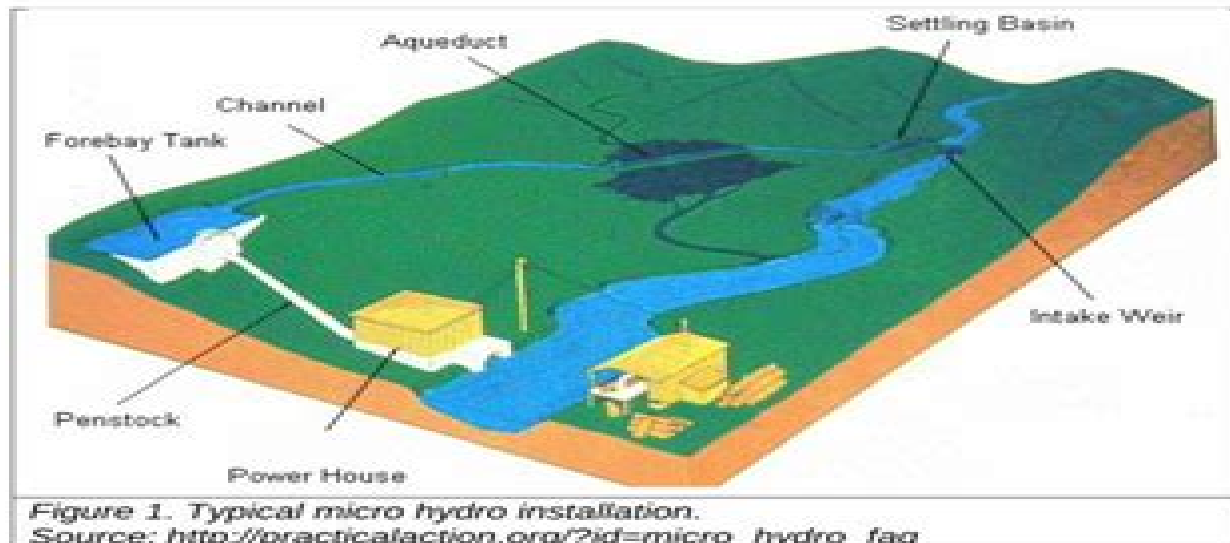

Jacques Chaurette eng.

A friend of mine asked me to help size a micro-hydro installation that he was thinking of installing at his cottage. Specifically he wanted to know how to calculate the flow rate of water through a pipe with a given vertical drop. This is a simple pump-sizing problem without a pump so I thought I would give him a hand. It turned out to be a very interesting topic and I hope you will find it helpful in understanding the concept.

A micro turbine is a wonderful way to generate you own electricity because it is so ecologically friendly. It has little or no impact on the environment and will provide continuous energy year round at low cost. Unfortunately, not many of us can access this resource since it usually requires a large track of land with a stream. For those of us who live in the country, it is possible that you could have a stream nearby on public land that you could access. In this case it may require a longer line (or penstock) to get the water from its source to your land where you will put your micro-turbine. This article is about how you can figure out how much energy will be available considering your terrain and water availability.

What Is Cavitation Jacques Chaurette:

Cavitation And The Centrifugal Pump Edward Grist,1998-06-01 This practical reference describes the occurrence of cavitation in a centrifugal pump and how unacceptable cavitation can be avoided It explains cavitation problems such as hydraulic performance loss hydrodynamically or thermodynamically induced surging and cavitation erosion General guidelines for acceptable operation conditions such as net positive suction head NPSH margins and minimum flowrates are presented along with evidence and logic for these proposed guidelines The Drag of Cavitating Cylinders Arranged in a Straight Grid Jean Jacques Geist,1959 Cavitation and Multiphase Flow Phenomena Frederick G. Hammitt,1980

Experimental and Theoretical Investigation of Cavitation in Water J. Ackeret,1936 Effect of Fluid Temperature on the Cavitation Performance of a High Hub-tip Ratio Axial Flow Pump in Water to 250°F (394 K) Walter S. Cunnan,1969 Fluid temperature effect on cavitation performance of axial flow pump **Cavitation and Associated Phenomena** Dmitry Biryukov,Denis Gerasimov,Eugeny Yurin,2022-04-27 Cavitation is a dangerous process which destroys objects in a fluid Scientific description of this multifaceted phenomenon is based on almost every area of physics and many interesting effects are connected with cavitation The most intriguing of them is sonoluminescence the light emitted from a cavitating fluid This book presents a full scale description of cavitation from the basic thermodynamic principles to special phenomena associated with this complex process from the dynamics of a single gas cavity to the catastrophic macroscopic manifestations from the domestic observations to the nuances of X ray spectroscopic research **Avoidance of Cavitation Damage** Wolfgang Tillner,Horst Fritsch,Rudolf Kruft,Wilfried Lehmann,Hartmut Louis,Gunther Masendorf,2005-06-24 Under certain conditions liquids can change to the vapour phase this is cavitation and it imposes serious limitations on pumps and pipelines if damage is to be avoided Improved understanding of pump cavitation in recent years has enabled a limited amount to be permitted to obtain the maximum possible amount of suction but in these circumstances it is very important to have some knowledge of the relationship between the intake operating conditions and the cavitation field and between the amount of cavitation and the extent of any material damage which can be expected The Avoidance of Cavitation Damage is concerned with the extensive field referred to by the term cavitation which involves industrial activities and is of immense economic significance At its simplest it is about damage limitation and damage avoidance in pumps and their installations and it is the first book made available in the English language which has this specific aim It deals with conventional rotodynamic and self priming side channel pumps as well as both reciprocating and rotary positive displacement pumps The Avoidance of Cavitation Damage can be wholeheartedly recommended to all practising engineers concerned with the design or use of pumps indeed it should become a standard reference work for all concerned with pumps and their use **Cavitation** Yves Lecoffre,2021-10-08 This text deals with the concept that cavitation is the main limitation to the performance of hydraulic components Topics covered include the vaporization of liquids due to high velocities or pressure fluctuations and the effects

of cavitation on the performances of rotary machinery One chapter is devoted to cavitation noise which concerns many users including surface ships and submarines and the author finishes with some examples of the use of cavitation and subject specific measuring techniques

Cavitation and Supercavitation M. A. Zaher, 2015-10-09 Cavitation is the formation of voids or bubbles containing vapor and gas in an otherwise homogeneous fluid in regions where the pressure falls locally to that of the vapor pressure corresponding to ambient temperature The regions of low pressure may be associated with either a high fluid velocity or vibration Cavitation is an important factor in many areas of science engineering and occurs in many industrial processes The book covers four general topic areas 1 The basic characteristics and physical mechanics of hydrodynamic cavitation 2 Cavitation damage from the viewpoint of both the hydrodynamic process and the reaction of particular materials 3 Cavitation study methods and equipment for research and performance testing 4 Cavitation effects in flow passages and hydraulic equipment and on fixed and free bodies The book is intended as a combination of a reference book for those who work with cavitation and as a monograph for advanced students interested in some of the basic problems associated with multi phase flow It is ideal for graduate students and research engineers and scientists

Principles of Cavitation and Bleeding System Applications M. A. Zaher, 2011-10-16 Discuss the current state of theoretical and experimental knowledge of various aspects of cavitating flows in pumps propellers and hydro turbines Discuss the developments in avoiding cavitation in single phase and multi phase pumping
